## EARL of HALIFAX,

First Lord Commissioner

For Trade and Plantations.

ing all sel pries there:

My LORD,

ensuing Treatise, now greatly enlarg-

#### vi DEDICATION.

enlarged, and, I hope, in some Respects, made less unworthy of Your Lordship's Protection. A Treatise relating to the Interests and Commerce of Great Britain, naturally seeks to shelter itself under the Patronage of an EARL of HALIFAX.

I'm Tink and Phinishins.

But there is still a more particular Motive for this Address. His Majesty, ever studious of the Good of his People, in appointing Your Lordship First Commissioner of Trade and Plantations, hath shewn the most vigilant Regard to the Welfare of both, by committing this import-

important Superintendency to Hands universally allowed the most able, and the most inclined to execute so great a Trust with increasing Success. Your Lordship, in a very short Space of Time, has confirmed our warmest Hopes. And Great Britain, with its dependent Colonies, form to themselves the most pleasing Prospects on this Occafion.

WERE not Your Lordship's Candour great as your Abilities, this inconsiderable Performance would never have appear'd before so skilful a Judge, nor the Author

### viii DEDICATION.

Author have prefumed to profess Himself in so publick a manner, what in great Truth He is, with the utmost Respect and Esteem,

MY LORD,

17 177

Your Lordship's most Obedient,

And most Devoted

Humble Servant.

this incomit at would at force it is incomit and the force it is in it in it.

THE

### INTRODUCTION.

LL Commerce is founded upon the Wants, natural or artificial, real or imaginary, which the People of different Countries, or the different Classes of Inhabitants of the same Coun-

try, are desirous, in defect of their own single Abilities, to supply by mutual Intercourse. If this Commerce be carried on between the Inhabitants of the same Country, with the Growth or Manusacture of that Country only, it is called Home Consumption: which is so far serviceable, as it preserves the several Professions and Stations of Life in their due Order, as it promotes Arts and Sciences, with a Rotation of Industry, Wealth, and mutual Good Offices between the Members of any Community. For these Reasons, Traffick, merely of this kind, is of great Importance, though it neither increases nor diminishes the Publick Stock of National Treasure.

Bur

But Providence having intended that there should be a mutual Dependance and Connection between Mankind in general, we find it almost impossible for any particular People to live, with tolerable Comfort, and in a civilized State, independent of all their Neighbours. Besides, it is natural for Men to extend their Views, and their Wishes, beyond the Limits of a fingle Community, and to be defirous of enjoying the Produce or Manufactures of other Countries, which they must purchase by some Exchange. Now this Intercourse with other Nations is called FOREIGN TRADE. And in the Exchange of Commodities, if one Nation pays the other a Quantity of Gold or Silver over and above its Property of other Kinds, this is called a BALANCE against that Nation in favour of the other. And the whole Science of gainful Commerce confists in the bringing this single Point to bear \*. Now there can be but one general Method for putting it in Practice:

<sup>\*</sup> This is spoken with respect to the ultimate Balance of Trade. For in reference to the intermediate Balance, it doth not always hold true. A Trade may be beneficial to the Nation, where the Imports exceed the Exports, and consequently the Balance paid in Specie, if that Trade, directly or indirectly, is necessary for the carrying on of another more profitable and advantageous. But then it is to be observed, This Trade is not beneficial, considered in itself, but only as it is relative and subservient to the carrying on of another. This is the Case, with respect to the greatest Part of our Trade to the Baltick, and

Practice; and that is, fince Gold and Silver is the universal Standard for making an Estimate of the Value, and regulating the Price of the Commodities or Manufactures of both Countries, to export LARGER Quantities of our own. and import LESS of theirs; so that what is wanting in the Value of their Merchandise. compared with ours, may be paid in Gold and Silver. The Consequence of which will be, That these Metals will be continually increasing with Us, as far as relates to that particular Trade and Nation, and decreasing with them. And in what Proportion foever their Money comes into our Country, in that Proportion it may truly be affirmed, That our Sailors, Freighters, Merchants, Tradesmen, Manufacturers, Tenants, Landlords, Duties, Taxes, Excises, &c. &c. are paid at their Expence.

THE PRINCIPLES of Trade therefore being so clear and certain in themselves, and withal so obvious to any Man of common Capacity and Application, it is a very surprizing Matter how it comes to pass, that both Men of good Understanding are many times totally ignorant B 2

the East-Indies: They are instrumental in procuring a Balance elsewhere, though, properly speaking, disadvantageous in themselves: Which brings the Matter to the Point from whence we set out; viz. "That the whole Science of gainful Commerce confists, ultimately, in procuring a Balance of Gold or Silver to Ourselves from other Nations."

#### iv INTRODUCTION.

of them, and Merchants themselves so divided in their Sentiments about them.

As to the first Case, perhaps it may be accounted for, if we consider what disadvantageous Notions Men of a liberal and learned Education have imbibed of this noble and interesting Science; on which the Riches, the Strength, the Glory, and I may add, the very Freedom of our Country, so essentially depend. Yet it has been represented as a dry unentertaining Subject, dark and crabbed, perplexed with endless Difficulties, not reducible to any fixed and certain Principles; and therefore sit for none, but the Mercantile Part of the World, whose Subsistence depends upon it, to give themselves any Trouble concerning it. But upon a fair Examination it will perhaps appear, that this Representation is very false and injurious in every particular.

As to the Second it must be indeed confessed, That Merchants themselves are very often divided in their Sentiments concerning Trade. Sir \* Josiah Child, Mr Gee, Mr Cary of Bristol,

<sup>\*</sup> The Words of Sir Josiah Child strongly corroborate what is here alledged. "Merchants, says he, while they are in the busy and eager Prosecution of their particular Trades, although they be very wise and good Men, are not always the best Judges of Trade, as it relates to the Power and Prosit of a Kingdom. The Reason may be, because their Eyes are so con-

tol, and almost all Commercial Writers, have long ago taken Notice of this Difference of Opinions. But however strange and unaccountable it may appear to Persons not conversant in these Matters, there is a very strong and convincing Reason, when the Affair is searched to the Bottom, for the disagreeing Opinions of different Merchants pursuing their respective Interests. The leading Idea, or the Point aimed at by every Merchant must be, in the Nature of Things, and in every Country, a Balance in favour of himself. But it doth not always follow, That this Balance is likewise in favour of the Nation; much less of other Merchants, whose Interests may be opposite to his own. While therefore each Person sees in a favourable Light his own Branch of Commerce, and defires to procure all possible Advantages to that Traffick.

se tinually fixed upon what makes for their peculiar Gain or Loss, that they have no Leisure to expatiate or turn their Thoughts to what is most advantageous to

the Kingdom in general." -

"The like may be faid of all Shop-keepers, Artificers, " Clothiers, and other Manufacturers, until they have st left off their Trades, and being Rich, become by the Purchase of Lands, of the same common Interest with " most of their Countrymen."

This justly celebrated Writer was himself an Instance of the Truth of this Observation. For, if I am not greatly mistaken, he did not write this very Treatise, Till he had left off Trade, and being Rich, became by the Purchase of Lands, of the same common Interest with the Rest of his Countrymen.

#### VI INTRODUCTION.

Traffick, on which the *Prosperity* of himself and his Family, perhaps totally, depends, it is but reasonable to expect their Sentiments should class.

HENCE therefore some have thought, That a Person of a liberal and learned Education. not concerned in Trade, is better qualified to engage in the Study of it as a SCIENCE, than a Merchant himself: because, say they, his Mind is freer from the Prejudice of Self-Interest, and therefore more open to Conviction in Things relating to the General Good. They add, That though he may not understand the Buying and Selling of particular Commodities, or the fittest Time to bring them to a profitable Market, (which is the proper Province of a Merchant) yet he may understand, in what Respects the Nature of that Trade contributes to the Loss or Gain of the Publick, with a Degree of Evidence, which perhaps the Merchant never thought of: as being indeed not concerned, -merely as a Merchant, in fuch kinds of Disquisitions.

But without pretending to determine who are the best qualified to engage in the Study of this most useful and extensive Science, let Us rather humbly recommend it to the Attention of them both. For undoubtedly both have their Advantages; and perhaps the Application of both together, might be more successful

#### INTRODUCTION, vii

cessful than either of them separately. If the One should happen to be less self-interested, by means of his Situation in Life, and more open to Conviction in Cases relating to the general Good; the Other, for the very same Reason, is more skilful in the Practice of Trade, and a better Judge, whether the Project, perhaps so fair in Theory, is feasible in Fact.

As to the Private Interest of Merchants, which is here supposed to be a Biass upon their Minds, this, most certainly, coincides, for the most Part, with the General Interest of their Country: and fo far it can be no Argument in their Disfavour. But nevertheless, Truth obliges Us to acknowledge, That in certain Cases, \* " A Merchant may have a " distinct Interest from that of his Country. " He may thrive by a Trade which may prove " her Ruin." Nay more, He may be impoverished by a Trade that is beneficial to her. But undoubtedly, the Moment he perceives he is carrying on a loofing Trade, he will quit it, and employ his Thoughts and his Substance in the Profecution of some other. Moreover, as it is a Balance in favour of bimfelf, which is the principal Object of his Aims and Endeavours, it cannot be expected, but of two

<sup>\*</sup> British Merchant, Vol. II. page 14t. Sw Edition, 1721. See likewife the Instances there given to confirm this Observation.

#### viii INTRODUCTION.

Trades, both advantageous to the Community, he will embrace that which is most profitable to himself, though it should happen to be less gainful to the Publick. It is a Maxim with Traders, and a justifiable one, To get all that can be got in a legal and honest Way. And if the Laws of their Country do give them the Permission of carrying on any particular gainful Trade, it is their Business, as Merchants, to engage in the Prosecution of it. - As to the great Point of National Advantage, or Disadvantage, this is properly the Concern of others, who fit at the Helm of Government, and consequently whose Province it is, To frame the Laws and Regulations relating to Trade in such a Manner, as may cause the Private Interest of the Merchant to fall in with the General Good of his Country.

FOR these Reasons therefore the Appointment of the BOARD of TRADE, must certainly appear a very wise and necessary Institution. The Intent and Design being, as I humbly conceive, to answer this very End. And the Honourable Members of it may be looked upon in this Light, as the GUARDIANS of the PUBLICK WELFARE. In presiding over the General Commercial Interests of the Kingdom, they are to inspect the several Branches of Trassick, that are carried on, and to give Notice to the Legislature, whether the Prosit of the Kingdom, or of the Merchant, is most promoted.

promoted; that the proper Remedies, or Encouragements may be applied, according as the Case requires, by stopping up the former Channels of a disadvantageous Trade, opening new ones, which may enrich the Publick and the Adventurer together; encouraging him to persevere, and to enlarge his Dealings in every Branch, which is beneficial to the Community; and in one Word, by enabling the Merchant to find his own private Advantage in labouring for the Good of his Country. Self and social Happiness, in this Case, must be made to UNITE: otherwise it will happen in this, as in most other Affairs, that social Happiness will not be promoted AT ALL.

AND as the Affairs of Commerce must for these Reasons ultimately come under the Cognizance of the Legislature, it were greatly to be wished, That Men of Eminence and Distinction, whose Birth and Fortunes procure them an Admission into the British Senate, would employ a little more of their Time in the Cultivation of a Science, so worthy of their greatest Regard and Attention. The Interest of their Country, and their own, do both concur in requiring such a Conduct from them. I beg Leave to mention not only the Interest of their Country, but their own: For it is a most certain Fact, though not sufficiently attended to, That the Landed Gentleman is more deeply concerned in the National

#### INTRODUCTION

Effects of an Advantageous or Disadvantageous Commerce, than the Merchant himself. If this Assertion should appear a Paradox to any one, I hope a few Lines will convince him of the Truth of it.

SUPPOSE then some General Calamity to befal the Trade of the Kingdom: - Or, to put a more firiking Case, Suppose the Mouth of the Thames to be choked up with Sands and Marshes, (as that fine River in France, the Rhone, really is) so as to afford no Port worth mentioning for the Purposes of Commerce: In such a melancholy Case, the Merchants, Manufacturers, Owners of Ships, Sailors, and all the Multitudes of Tradesmen dependent upon this Commerce; would-indeed be the first affected; but they would not be the GREAT-EST LOOSERS. For after the first Shock, they would easily remove with the best of their Effects, and try their Fortunes elsewhere. But the Landed Gentleman, what must he do? he is bound down to the Soil, and cannot remove his Estate, though the Persons are gone, who used to consume the Product of it. Thus the Evil becomes incurable, and perpetual with regard to him, and every Day increasing: whereas with respect to the Merchant, it was only a Shock at first, which he has the Chance of getting the better of, by removing to a more advantageous Situation.

It is fervently to be wished, That Providence may never visit Us with so terrible a Judgment, as the choking up the Mouth of our Principal River leading to the Metropolis of the Kingdom. But the bare Supposal of such a Case is sufficient to prove, I humbly presume, with irresistible Evidence, That the Landed Gentlemen in the Counties adjacent to London, are more deeply interested in the Consequences of the Trade of London, than the Merchants themselves: And therefore, That those supposed Distinctions of Landed Interest, and Trading Interest, in the Sense they are commonly used, are the most idle and silly, as well as false and injurious, that ever divided Mankind.

But above all, we must beg Leave to obferve, by way of Inducement to the Landed Gentleman to turn his Thoughts to this Study, That his very private Interest is rather a Help, than a Detriment to him in the Prosecution of it. It puts no wrong Biass upon his Mind, but directs him to the true Point of Light, from whence to see, and to judge of these Affairs: which is a Circumstance in some respect peculiar to his Situation.

FOR, if we suppose the Scene still to continue in and about London, (though the same would hold true of any other Part of the C 2 King-

#### xii I NoT R O D U C T I O N:

Kingdom) as the private Interest of the Landed Gentleman arises from the General Commerce of the Place, he can have no partial Views in relation to Trade, nor can reap any Advantage from Monopolies, Exclusive Companies, or such like destructive Artifices. The more Persons there are employed in every Branch of Business, the more there will be to consume the Produce of his Estate: so that he will have no Temptations to complain, That the Trade is over stocked, or wish the Promotion of this Trade, in order to the Declenfion of that. In short, his own Interest is connected with the Good of the Whole, so that he cannot but be extremely well qualified to understand, and to promote it, if he will please to make Use of the Advantages he is happily possessed of.

#### A. BRIEF

### ESSAY on TRADE.

李章章李章(李章章李章李章李章李章李章李章

The principal Advantages of France with respect to Trade.

HE Natural Produce and Commodities of the Country.

These are chiefly Wines, Brandies, Silk, Linen, Hemp, and Oil. I do not mention Corn; for though they raise

a great Deal, yet, as they are great Bread-Eaters, they confume a great Deal, and have little to spare for Exportation. Their Harvests also are more precarious than Ours, and often fail.

II. THE

III. THE Rules and Regulations they are obliged to observe in Manufacturing their Goods, and Exposing them to Sale, is a great Advantage to the Credit of their Manufactures, and consequently to Trade. All Sorts of Goods for Exportation, must undergo an Inspection of the proper Officer in the Publick Hall: there they are compared with the Patterns or Samples delivered in before. The Bad, and such as do not answer to their Samples, are consistently with a Fine levied upon the Offender. By these means, the fraudulent Designs of private Traders, who would get rich at the public Expence, are prevented, and the National

<sup>\*</sup> The Law of France, obliges all unmarried Men to ferve as Common Soldiers in the Militia and the Army, unless they have particular Exemptions on Account of their Stations and Professions.

# AN ESSAY ON TRADE. 15 tional Manufactury constantly kept up in bigh Credit.

IV. Their excellent Roads, their navigable Rivers and Canals, are of fingular Advantage to their Trade.—Their great Roads are always in good Order, and always carried on in a fireight Line, where the Nature of the Ground will permit; and made at a most prodigious Expence; each Province being obliged to make and repair their own Roads. And yet there is no Expence for Turnpikes from one End of the Kingdom to the other.

THEIR Rivers are indeed, for the most Part, the Work of Nature: the Seine, the Loire, the Garonne, and the Rhone, with all the Rivers which fall into them, help to carry on a Communication with most of the great Cities of the Kingdom.

But their Canals are their own proper Praise; and equally deserving Admiration on Account of their Grandeur and Contrivance, as for their Usefulness to Trade, in lowering the Price of Carriage. Among these, that of Languedoc, and the two Canals of Orleans and Briare, are worthy to be particularly mentioned. By means of the former; a Communication is opened between Bourdeaux and Marfeilles, between the Ocean and the Mediterranean, without passing through the Streights of Gibraltar,

Gibraltar, and furrounding all the Coasts of Portugal and Spain: and by Virtue of the two latter, an easy Intercourse is maintained between all the great Towns situated on the Seine and the Loire. Many other Canals there are, and many more still intended to be made, greatly advantageous to their Commerce.

V. The French enjoy a great Advantage in the Goodness of their Sugar Colonies.—It is not owing to any superior Policy in them, or wrong Conduct in us, nor yet any greater Oeconomy in their Planters, or Profuseness in ours, (for upon the strictest Enquiry, both will be found to be equally culpable) that they exceed Us in the Cheapness or Goodness of their Commodities; but because our Leeward Islands are worn out, being originally of no Depth of Soil; and the Ground is more upon a Level, consequently more subject to be burnt up: whereas their Islands are still very good; in Mar-tinico particularly the Ground is rich, the Soil deep, diversified with high Hills, affording copious Streams of Water, and refreshing Shades. Hence it is, that their Planters can raise and manufacture their Sugars; &c. so much cheaper than ours. Add to this, that the Inhabitants of old France do not use the tenth Part of the Sugars for Home Confumption, which the Englist do; and therefore have that Commodity to export again to Foreign Markets, and with it to encrease the National Wealth.

VI. The

Vilia i C

VI. The French Colonies receive all their Luxuries and Refinements of Living from their Mother Country; which is a very great Advantage to it. - They are not fuffered, nor indeed doth it appear, that they are much inclined to go to any other Shop or Market for these Things. Neither have they set up any Manufactures of their own to the Prejudice of their Mother Country. Indeed, as to the Neceffaries of Life, they supply themselves with them where they can; and frequently buy of the English. But this is a Case of Necessity, which cannot be subject to Restraints. Articles of Luxury, Parade, and Pleasure, we very feldom hear that they buy any of them from Us.

on feveral Sorts of Goods imported, is of greater Advantage to Trade, than can easily be imagined.—In the Port of Bourdeaux (and I take it for granted so good a Regulation obtains in other Places) there are Publick Warehouses, very proper and convenient, adjoining to the Custom-house. And all Provisions and Goods necessary for the Use of their Sugar Colonies, are there deposited by the Merchant, till the Ship sails, Duty free, paying only a moderate Price for Cellerage. When she returns, the Sugars, &c. are landed in the King's Warehouses, where they remain, till the Importer

D

has found a Purchaser for a proper Quantity: then he pays the Duty for that, and has it taken away, letting the Rest continue. Or if he intends these Goods for Exportation, there they lie ready and convenient. By this means he is never driven to Streights on Account of the King's Duty; and is enabled to carry on a very extensive Trade with a small Stock. The Consequence of which is, That many Persons are hereby capacitated to enter confiderably into Commerce, who could not otherwise have done it. For One Thousand Pounds Sterling in France, will go near as far as Two Thoufand Pounds in England. - Not to mention, That as there is no Money immediately advanced on Account of the King's Duty, the whole Gains of the Merchant will arise only from the Money actually in Trade: now as this is less by near one half to what it would have been, had the Duty been all paid at once, consequently he can afford to sell one half less than he must have demanded in the other Cafe.

VIII. Their Neighbourhood to Spain, and prefent Connection with it, is of so great Advantage, as to be worth all their Trade besides.—For it is certain, They get more from the Spaniards than all the Trading Nations in Europe. Their Poor from Perigord, Limosin, and other Places, come yearly into Spain to reap their Corn, and gather in their Vintage: and

carry

carry back what they have earned to spend in France. The Fishermen from Bayonne, and the neighbouring Places, supply them with great Quantities both of fresh and salt Fish to eat on Fast-Days, and to keep Lint. The Pedlars and Shop-keepers in Spain are mostly French, who retire into their own Country, when they have made their Fortunes. The Towns in Languedoc supply them with Cloth, Silks, and Stockings; Rouen with Hats, and coarse Linen Stuffs; Abbeville, with superfine Cloths; Amiens and Arras, with worsted and camblet Stuffs; and Lions, with all Sorts of rich Silks, Gold and Silver Lace, &c. for their Confumption both in Europe and America. In short, the greatest Part of the Produce of the Mines of Potosi is brought into France. Hence it is, that their Payments are all in Silver: and Gold is more scarce in France, in the Currency of Coin, than Silver is in England. A plain Proof, that they have the great Trade to Spain, as we have to Portugal.

IX. Their Address in drawing raw Materials from other Countries to work up in their own, serves greatly to enlarge and extend their Trade.—France produces some Wool and Silk, but not a fourth Part of what they manufacture. Wool they import from Barbary, the Levant, and Spain. They also bring Wool from Switzerland. Some little perhaps is run from England; but, I have good Reason to D 2

believe, not much. The Quantity from Ireland is very considerable; which is owing to our own wrong Policy. The best of their raw Silk they draw from Piemont, the Levant, Italy, and Spain. Their Cotton is brought from the Levant, and from their Sugar Colonies. And the Askes for making Soap at Marseilles, are chiefly imported from Egypt.

X. They reap unspeakable Advantage, by the Permission and Encouragement given to Foreign Merchants and Manufacturers to Settle among them. - By this good Policy the Price of Labour is always kept fufficiently low. A Competition and Emulation are raised, who shall work, and sell the cheapest; which must turn out greatly to the National Advantage, though it may not be fo favourable to the private Interest of Individuals. For these Reasons, the Government is particularly gentle and indulgent to Foreigners. And the Situation of the Country is greatly affistant to this Disposition of the Government. -France is surrounded with populous, that is, prolifick Nations, who have no Trade and Manufactures of their own to employ their Poor. Flanders, all Germany on the Side of the Rhine, Switzerland, Savoy, and some Parts of Italy, pour their supernumerary Hands every Year into France; where they are careffed, and received into the Army, or the

the Manufacture, according to their Inclinations. The Rhone is so easy and cheap a Conveyance, for the Swarms of Inhabitants bordering on the Lake of Geneva, that so small a Sum as One Shilling, or Eighteen Pence each Person, will bring them to the chief Manusacturing Town in the Kingdom, viz. Lions. And there are said to be no less than Ten Thousand Swiss and Germans employed in that City. The Numbers also in all the other Commercial Towns are very great, and daily increasing.

XI. The English Monopolies, which are fo destructive to the Interests of Great Britain, become, for the very same Reason, of the greatest Benefit and Advantage to France. - Marfeilles is a flagrant, and a melancholly Proof of this Affertion. For the Trade of this Place hath flourished and increased just in the same Proportion, as that of our Turky Company funk and declined. All the fine Streets and new Buildings of the City, date their Original from this Period. So that we may truly fay, They were built, and are now supported, by the exclusive Turky Company of England. Moreover, the English Hudson's-Bay Company is the only Cause, which can make the French Settlements in so wretched a Country as the Northern Parts of Canada, to flourish; with so difficult and dangerous a Navigation, as that up the Bay of St Lawrence.

rence. It is this, and no other, is the Cause that enables them to extend their Colonies, and to undersell the English in all the Articles of Furr; which they apparently do in Times of Peace.

XII. The publick Stock of Wealth is greatly increased, by Foreigners of all Countries travelling among them. — The Advantages from hence accruing have not been so much attended to, as, I humbly think, they justly deserve. For while these Foreigners reside in the Country, they not only pay for their Food and Board at an high Rate, but they also cloath themselves with the Manufactures of it, and buy many Curiosities. But this is not all, For having contracted a Liking to the Produce and Manufactures of the Country they travelled in, they continue to use them when they are returned to their own; and so introduce them to the Knowledge, Esteem, and Approbation of others: This begets a Demand; and a Demand for them draws on a Correspondence, and a settled Commerce. These are the Advantages which the French enjoy by such Numbers of Foreigners travelling among them; whereas they scarce ever travel themselves; and by that Means circulate the Money in their own Country.

XIII. FRANCE enjoys no small Advantage, as it doth not lose much by the Article of Smuggling,

gling, in comparison to what England doth.— This is owing to the Strictness of their Government, the many Spies they have upon every Man's Actions, and being able to punish the slightest Offence more severely, and in a more summary Way than we can, or is consistent with a free Constitution to do.

\*\*\*\*\*\*\*\*

The Principal DISADVANTAGES of FRANCE with regard to TRADE.

I. HE first Disadvantage to a free Trade is the Government, which is arbitrary and despotick; and therefore such as a Merchant would not chuse to live under, if he knows the Sweets of Liberty in another Country, and has no Attachment of Family, or Interest to keep him still in France. - It must be acknowledged, his Property, generally speaking, is fecure enough, but his Person is not fo. To explain this, we must beg Leave to observe, That though there are fixed and stated Laws in France to decide all Cases of Property, and criminal Causes, as here in England; fo that a Man may know the Rules he is to be governed by in those Respects, and can have an open Trial for his Life and Fortune:

tune: yet there are no Laws to ascertain the Nature of Political Offences, or to circumscribe the Power of the Judge; so that he must be entirely at the Mercy of the Lieutenant de Police, and his Deputies; who can imprison him at will, without assigning any Reason, or bringing any Evidence to constont him. And therefore his only Security consists, in being continually lavish in the Praise of the King and the Ministry, and in saying nothing which may afford the least Pretence to the Spies, who swarm all over the Kingdom, to inform against him.

of Trade, is the Romish Religion; which has added to its many other Absurdities, a Spirit of Cruelty and Persecution, so repugnant to the Scope and Tendency of the Gospel.—Therefore a Protestant Merchant, if at the same Time a conscientious Man, will find himself very often reduced to great Difficulties, in order to avoid on the one Hand the Sin of Hypocriss, by Compliances against his Conscience, or on the other, the Danger attending the Exercise of his Religion, and the Educating of his Children in the Protestant Way. This, I say, will often happen, even at present; though the Bigotry of the Court of France is not near so great, as it was in former times.

III. ANOTHER great Burden, and confequently a Disadvantage to the Trade of France, is, The great Number of Religious of both Sexes. -The lowest Computation of these amounts to near Three Hundred Thousand Persons: a great Part of which Number might, and would be employed in Trade and Manufactures; and the Rest might be useful to Society in other Spheres. But that is not all; They are a very heavy Weight upon the Publick. Vast Estates are appropriated for the Support of some of these Religious Orders, whose Fund is continually accumulating, not only by Legacies and Donations, but also by whatever Fortune each Person is possessed of, at the Time of taking the Vow. And others, who are of the Mendicant Orders, and are allowed to have 'no Property, become a continual Tax upon the Industry and Charity of the People; and these mostly of the middling and lower Sort. Not to mention the increasing Riches and dead Wealth in all their Churches.

IV. A fourth great Disadvantage to the Trade of France, is their numerous and poor Nobility. — The Nature and Constitution of that Government, require the Notion of Birth and Family to be kept up very high, as it will always create an indigent Nobility, and confequently dependent upon the Court for such Preserments as may not derege, or bring a

Stain upon their Family. Moreover, the same refined Policy induces the Court to make the Military Service be esteemed the most Honourable; as it must render the whole Body of the Nobility, Soldiers to fight their Battles; the Richer serving for Glory, and the Pooren for an honourable Support. The Consequence of all this is, That they heartily despise the Bourgeois\*, that is, the Merchant and Tradefman: and he, when he gets rich, is as desitious of quitting so dishonourable an Employ, wherein

In France, the Inhabitants are usually distinguished by three different Ranks, or Orders; The Nobleffe, the Bourgeois, and the Paifans. Each of these are totally diffinct from the other. The Posterity of the Noblesse are all Noblesse, though ever so poor, and though not honoured with the Titles of Count, Marquis, &c. as Noblemen are here in England. The Posterity of a Bourgeois, though ever so rich, and though the Family have left off Trade a Hundred Years ago, are still but Bourgeois, until they are ennobled by Patent, or have wiped off the Difgrace of having been Merchants, by some figual Military Service, or have purchased some bonourable Employ. Therefore when the Nobleffe call the Merchants Bourgeois, Burgesses, they mean it as a Term of Infamy and Repreach, answering to that of pitiful low Mechanick in English. Indeed, by some Ordonances, the Noblesse are permitted to engage in certain Branches of foreign and wholefale Trade, without bringing any Stain upon their Family. But these Permissions will have very little Efficacy to induce the Nobility to turn Merchants, as long as the Military Service is fo. bighly exalted in Credit and Reputation above Merchandize. The very Genius of the Government, makes it a SCAN-DAL not to be a Soldier: Laws will have little Force against this.

wherein his Riches cannot secure him from Infult and Contempt. Being therefore defirous of raising his own Family to be of the Nobleffe, he leaves off Trade as foon as he can, and breeds up his Sons to the Military Profession, or purchases some Office in the Law or Civil Government, which may ennoble them.

V. THE Trade of France suffers another Inconveniency by the Nature of its Taxes. -Some of these, in certain Provinces, are very arbitrary; as the Taille, which is levied mostly upon the poor Peasants and Manufacturers in the Country Villages. Others are very heavy; as the Duty upon Salt, which is shockingly oppressive. Others again, though not quite so oppressive, are yet equally improperly laid; because they are upon the Necessaries of Life, which are to feed the Tradesman, and to victual the Shipping. Thus, for Example, all Sorts of Provisions, Corn, Wine, Butchers Meat, Poultry, Eggs, Fish, Garden-Stuff, and Fruit, pay a Duty at the Entrance of some of their great Cities. There are Duties also lately laid upon Soap and Candles. And in the Pais des Etats, where the most grievous of these Imposts are not levied, they lay a Provincial Duty upon all Things going in or out of that Province; which makes the Merchandize so passing through, become the dearer at a foreign Market. E 2 VI. THE

VI. THE Maitrifes, which so generally prevail in France, is a Clog to the Trade of the Country. - These Maitrises are much the same as our Companies in Towns Corporate; only we have this Advantage, That in England their pernicious Effects can be more eafily eluded by having Shops, &c. within Glass Windows. Besides, our best Manufacturing Towns, such as Birmingham, Manchester, Leeds, and even four fifths of London itself, viz. Westminster, Southwark, and all the Suburbs, have no Companies at all. Whereas in France all Tradefmen are obliged to be free of their proper Maitrise, before they can set up. The Fine for this, in some Trades, is very considerable. And there is also in Time of War, an annual Demand of a certain Proportion of Men out of each Maitrise; which is understood to imply a Sum of Money by way of equivalent. Thus, the more these Maitrises become useful to supply the Exigencies of the Government at a Pinch, the more Privileges they will acquire; and the greater the Privilege is of any particular Company, the less will be the general Trade of the Country.

VII. THE French sustain some Disadvantage by their Monopolies and exclusive Charters. - They have an East-India Company at Port l'Orient: Marseilles is a free Port for the Lewant and Barbary Trade; whereas there is a Duty

Duty of 20 per Cent. upon all Merchandize of those Countries, if imported into any other Port of France in the Mediterranean. And even at Marseilles, there is a particular exclufive Company for importing Corn and Wool from Africa. Lions is free for all Silk entring. or going out; whereas there is an heavy Duty in the neighbouring Towns; by which means, Lions may be faid to have an exclusive Charter. And there is good Reason to conclude, there is something of the same Nature for the Turky Cloth at Carcassonne, the Silk and Worsted Stockings at Nismes, the Clothing for the Soldiery at Lodeve, the Superfine Cloth at Abbeville, the Stuffs at Amiens, the Camblets at Arras, the painted Linens and Cottons at Rouen. &c.

VIII. THE French labour under no small Disadvantage on Account of the Expence they are at in the Article of Shipping. — They have more Men to navigate their Ships than the English, because they are not so expert Sailors. They must carry some supernumerary Landmen, by the King's Orders: They must have many Officers to govern these Men, because the Merchant is to be responsible for them when the Ship returns. These Officers will have a grand Table, a Cook, and new Bread every Day. The Ship lies long in Port, if sent to the West-Indies to dispose of the Cargo: Because their Creolians are said to be

fo dishonest, that they do not care to trust them with Commissions. And so the Expences of the Officers and of the Crew run very high. Add to this, that the Officer belonging to the Marine in France, will find Ways and Means to give great Trouble to the Merchant, both as to the Choice of Sailors, and of Officers, unless he is properly considered: Which is generally done by buying some Ship Stores of himself, or Friends, at an' exorbitant Price.

IX. THE two National Vices of the French, Gaming and Fine Clothes, is a great Hurt to their Trade. - These Expences cannot be supported but by a large Profit; and that will always lessen the Demand at a foreign Market, if their Neighbours can afford to sell cheaper. Not to mention the fwift Ruin which Gaming sometimes brings on, and the Loss of Time occasioned by it.

X. THE Situation of the French Ports, are a great Disadvantage to them, with respect to the Hamburg and Northern Trade: And in regard to the Southern and West-Indies, they are not better fituated; and are not near fo many, nor so good as ours, especially if we take Ireland into the Account. They have only an Advantage with respect to the Mediterranean.

To

3.1

To these Disadvantages, it has been intimated, I ought to have mentioned their many Holidays, on which they must not work, and their pompous Processions, which draw the People a gazing after them. - The Thought did occur to me before, at the Time of writing the first Edition: But I suppressed it then, and now beg Leave to affign the Reafons; viz. In the first Place, these Things are greatly wearing off in France every Day; so that the Loss of Time is not so considerable, as one may imagine. Secondly, Allowing that Jone Time is idled away during these Holidays, and in feeing Processions, &c. still, if we cast up the Account of the Time and Money which are fpent here in England by all forts of Manufacturers in Horse-Races, Cock-sightings, Cricket Matches, Bull-baitings, but more especially in Mobbing and Electioneering, (all which are not in France) I am perswaded, we shall find the Advantage gained over them, on the Score of their Holidays and Processions, to be none at all; and that upon comparing both Articles together, the Amount of the Difadvantages will be found to be greater on our Side, than on theirs.

### 32 ANCESSAY ON TRADEA

The Principal Advantages of GREAT BRITAIN with respect to TRADE.

I. HE natural Produce and Commodities of the Country; Corn, Wool, Lead, Tin, Copper, Coal, Butter, Cheese, Tallow, Leather. — All which are not to be found in France, in that Plenty and Abundance they are in England.

II. The Number, Goodness, and Situation of our Ports. — Those on the Western Side of Great Britain (especially if we reckon Ireland a Part of ourselves, and include both Islands under one General Interest, as in Reason and Policy we ought to do) are almost as well situated for the Southern Trade, as the French: They are four times as many in Number, and much better for Safety, and Depth of Water. And as to the North and Baltick Trade, the French can come into no Comparison with ours.

- III. Nature has been very bountiful, in beflowing on us fuch excellent Fisheries; particularly the Herring-Fishery, on the Northern Coasts of Scotland, and the Cod on the South West of Ireland. — These great Advantages are always in our Power to cultivate and improve: And it is our Fault, and our Reproach, that we do not.
- IV. ENGLAND enjoys another Advantage by means of its free Government. A Merchant can go to Law with the Crown, as eafily as with a private Subject. The Judges are for the Life of the Prince on the Throne, and consequently not under the immediate Influence of the Court. No Man's Person can be detained, but a Reason must be given, and the Matter brought to an open Trial, where his Equals are to be his Judges, and to decide between him and the Crown, whether he hath committed an Offence against the State, or not.
- great Advantage, considered merely in a Commercial View, is the Liberty of Conscience we enjoy in these Kingdoms. Every Man is permitted to worship God in the Way he thinks the right and true, without Fear or Reserve; and may educate his Children in his own Religion. The Roman Catholicks indeed are under

fome legal Discouragements: But it is plain, the Legislature considered them rather as a Political, than a Religious Sect, when those Laws were enacted. And the present Government, by its Conduct towards them, has given them sufficiently to understand, That they shall not be disturbed in the free Exercise of their Religion, provided they will give no Disturbance to the State in Civil Affairs, by siding with its Enemies. This, surely, is but a reasonable Demand: And here the Matter seems to rest.

VI. ENGLAND has always enjoy'd an Advantage in Trade, as its Manufacturers have ever been in high Repute for their Skill and Ingenuity.—Our Locks, Chains, Clock-work, Mathematical Instruments, and all Sorts of Cutlery Ware, far exceed all others at this Day, and are deservedly preferred by foreign Nations. And our Sailors are considerably superior to the French, in their Art and Dexterity.

VII. ENGLAND enjoys a very visible Advantage over France, as the whole Bulk of our People may be concerned in Trade, if they please, without any Difreputation to their Families. The Profession of a Merchant is esteemed full as honourable as that of an Officer. And no Man need leave off Trade, when he finds himself rich, in order to be respected as a Gentle-

Con

Fo

the

Can

Gentleman. It is likewise no Scandal for younger Brothers of the most antient Families to be bred up to Trade and Business.

our vast Colonies on the Continent of America.— From Newfoundland to Georgia, is an immense Country; where all the Inhabitants do use more or less of the Growth of their Mother Country; and England, again, receives the Produce and Growth of theirs. This is a mutual Benefit, and still improveable.

IX. THE Island of Jamaica has some Advantages over any of the French Islands, on Account of its Situation, to carry on a beneficial Trade with the Spanish Main; the Sweets of which have been so sufficiently felt during the late War, as to need no farther Illustration. And this Island is capable of great Improvements in many other Respects.

X. The very Wants of Great Britain in one Respect, might be turned into a singular Advantage over the French in another. — It is certain, France cannot carry on a Trade to most Countries with that Advantage to the Country it trades with, as the English can. — For Example; The English can trade with the Spaniards to MUTUAL Advantage: If the English export Cloth and Stuffs to Spain, they can take off Fruits, Oil and Wine, by way

of Barter. Whereas the French can make no use of these Commodities, having so much of their own Growth both to use and to spare.—
A Consideration of this Nature, well timed, and strongly urged, might have a good Effect upon the Spanish Court, to induce them to savour the English Commerce, and discountenance the French. It is owing to the successful Application of Sir Paul Methuen on this very Head, when Envoy to the Court of Portugal, that the English at this Day enjoy the whole Trade of Portugal, and that the French, in a Manner, are excluded.

\*\*\*\*\*\*\*\*\*\*\*\*\*\*\*\*

The principal DISADVANTAGES of GREAT BRITAIN with regard to TRADE.

is the Want of Subordination in the lower Class of People. — This is attended with dreadful Consequences, both in a Commercial and a Moral View. If they are subject to little or no Controll, they will run into Vice: Vice is attended with Expence, which must be supported either by an high Price for their Labour, or by Methods still more destructive. The

The End of all is Poverty and Difease; and so they become a loath some Burden to the Publick. Nothing is more visible, than the great Difference between the Morals and Industry of the manufacturing Poor in France, and in England. In the former, they are fober, frugal, and laborious: they marry, and have Flocks of Children, whom they bring up to Labour. In the latter, they are given up to Drunkenness and Debauchery: The Streets swarm with Prostitutes, who spread the Infection, till they are carried to an Hospital, or their Grave. The Men are as bad as can be described; who become more vitious, more indigent and idle, in proportion to the Advance of Wages, and the Cheapness of Provisions. Great Numbers of both Sexes never working at all, while they have any thing to fpend upon their Vices.

II. THE prodigious Expence of Electioneering, is another fatal Stab to Trade and Industry.—It is not only so much Money spent, but it is spent mostly upon Manufacturers; and so it gives them a Taste for Idleness, and brings on an Habit of Drunkenness, and Extravagance. The Want also of Subordination, just now complained of, is mostly to be imputed to the same Cause, as it sets them above Controll, frees them from all Restraint, and brings down the Rich to pay their Court to them, contrary to the just and proper Order of Society. III. ANOTHER

III. ANOTHER very great Burden on the English Commerce, is the vast Numbers of Poor; and those every Day increasing.—If we trace the Matter to its Fountain-bead, we shall find it to be owing principally to the same Causes, viz. Electioneering, and the Want of Subordination. And if a Calculation was made of the Expences of Electioneering, and the ruinous Consequences of it, together with the annual Poor Tax, I am very sure it would exceed, in the Proportion, what France expends in maintaining Three Hundred Thousand Religious of both Sexes: so that we gain no Advantage over France in this respect, by our own Dissolute-ness and ill Management.

IV. Our Trade is greatly burthened by the Nature of most of our Taxes, and the Manner, of Collecting them. — The Customs on the Goods imported, make those Goods come much dearer to the Consumer, than they would do, if the Consumer himself was to pay the Duty: and this becomes a strong Temptation to our People to Smuggle. The Taxes upon the Necessaries of Life, are in Fact so many Taxes upon Trade and Industry. And such must be accounted the Duties upon Soap, Coal, Candles, Salt and Leather. The expensive Manner likewise of collecting them, is still an additional Disadvantage; such as the Multiplication and Splitting of Offices, Patent-Places, Fees, Sines Cures,

Cures, Pensions, &c. &c. These Things indeed create a Dependence upon the Court, and are faid to strengthen the Hands of the Government; but if they do so in one respect, they weaken it much more in another. They give too just Cause for Complaint; the best Friends of the present Establishment are grieved to see any Measures which they cannot vindicate. Repeated Murmurs, where there is a real Foundation for them, naturally tend to alienate the Affections of the Bulk of the People, which above all Things should be guarded against; because in Times of actual Danger, it is the People, and not Place-Men and Penfioners, who can fave the Government, and oppose themselves against the Invasions of Foreign, or the Insurrections of Domestick Enemies. As was plainly feen in the Case of the late Rebellion.

V. The great Number of Smugglers in England, are of infinite Detriment to Trade.—
They carry nothing but Bullion, or Wool out of the Kingdom, and return mostly with the Commodities of France. They are the necessary Cause of creating many Offices, maintaining Sloops, Smacks, &c. to guard against them; and they furnish a Pretence for adding many more. Thus they become doubly Mitchievous. They tempt others to do the like, for fear of being ruined in their lawful Trades by being undersold. The Practice of Smuggling debauches the Morals of the common People,

People, it leads them into Perjury, and tutors them up in all Vice and Extravagance. So many Expences incurred, so many Deficiencies in the Revenue, must be made up some other Way; that is, by Duties not so liable to be embezzled. And therefore Fact it is, That every Man in paying Taxes for Land, &c. pays for the Damage done, or caused by Smuggling. ... And yet till there is a proper Subordination introduced, and the Qualification for Voting something altered from what it is at present, it is easy to fee, there never can be any effectual Cure for this growing Eyil. Smugglers are, for the most part, Inhabitants of Boroughs and Towns Corporate: They, or their Relations, Friends, Dealers, Acquaintance, &c. are Voters: And-Verbum sat sapienti.

VI. Our Monopolies, publick Companies, and Corporate Charters, are the Bane and Destruction of a free Trade. — By the Charter of the East-India Company, at least Nine Thousand Nine Hundred and Ninety Nine British Subjects, out of Ten Thousand, without having committed any Fault to deserve such a Punishment, are excluded from trading any where beyond the Cape of Good Hope. By the Charter of the Turky Company a like, or a greater Number, are excluded from having any Commerce with the whole Turkish Empire. The Hudson's Bay Company engrosses all the Furr Trade with the Indians, in an Extent of Coun-

try almost as large as half Europe. Thus the Interest of Nine Thousand Nine Hundred and Ninety Nine Fellow-Subjects, is facrificed, in fo many Respects, for the Sake of a single One. The whole Nation fuffers in its Commerce, and is debarred trading to more than three Fourths of the Globe, to enrich a few rapacious Directors. They get wealthy the very fame Way by which: the Publick becomes poor, viz. 1st, By exporting small Quantities of our own Manufactures, in order to have an exorbitant Profit; and 2dly, by importing but a few of the raw Materials of foreign Countries, that they may have the bigher Price for what they bring home. — A double Mischief! equally fatal to the Community, both by the Smallness of their Exports and Imports.

And as to corporate Charters, and Companies of Trades, they are likewise so many Monopolies in the Places to which they belong, to the great Detriment of national Commerce.—
To convince any one of this, Let him but suppose a Set of Town and Country Butchers frequenting the same Market; and that the Country Butchers were excluded for a Market or two; would not the Town Butchers raise their Price? i. e. put all their fellow Citizens under Contribution, by means of this Privilege?
And doth not every other Company the same in all Things they sell? And what is the Consequence?—A general Dearness among one another,

another, which must light at last upon the Foreign Trade, and therefore diminish the Quantity to be exported.

VII. Our Imprudence and Narrow-spiritedness in not inviting Foreigners to settle among Us, is another material Disadvantage to the English Trade. — Foreigners can never get rich in a strange Country, but by working cheaper or better than the Natives. And if they do so, though Individuals may suffer, the Publick is certainly a Gainer; as there is so much Merchandize to be exported upon cheaper Terms, or so much saved to the Merchant, whereby he may afford to export the cheaper. Not to mention, That by this means the Price of Labour is continually heat down, Combinations of Journeymen against their Masters are prevented, Industry is encouraged, and an Emulation excited: All which are greatly for the Publick Good.

Besides, a Foreigner just escaped from Slavery and Oppression, when he gets rich in a Land of Liberty and Plenty, is not likely to return home, but will settle among Us, and become one of ourselves, with his whole Family. And what are ALL Englishmen but the Descendants of Foreigners? In short, it is the same weak Policy to prevent Foreigners settleing among us, as it is in the Poor about London, to oppose the Welsh and Irish coming

up to work in the Gardens, and carry in the Harvest; not considering, that if the Gardener or Farmer cannot have his Work done cheap, he cannot afford to sell the Garden-Stuff, Bread, &c. cheap to them. So that they themselves find their Account in the Cheapness of the Labour of these Persons. Indeed the English should give MORE Encouragement, if possible, to Strangers than France doth, as for many other Reasons, so particularly for this, That the Flemish, Germans, Swiss, Picamontise, Italians, &c. can arrive at most of the Manufacturing Towns in France at a trissing Expence; whereas the long Journey from their own Country, and the Passage over into England, are a very great Discouragement to Foreign Manusacturers to come to settle here.

VIII. Our ill judged Policy, and unnatural Jealousy in cramping the Commerce and Manufactures of IRELAND, is another very great Bar against extending our Trade. — This is a most unaccountable Infatuation, which has not the Shadow of a publick and national Reason to defend it. For if Ireland gets rich, what is the Consequence? England will be rich too, and France will be the poorer. The Wool which is now Smuggled from \* Ireland G 2 into

<sup>\*</sup> A Clergyman, whose Living is in the West of Ireland, assured me, That just after the Peace, the Wood Smugglers of his Parish, got upwards of 50 per Cent. by the Wool they sold to the French. — As long as this is

into France, and manufactured there, and from thence fent to oppose our own Commodities at foreign Markets, would be manufactured in Ireland; the French would loose the Benefit of it, the Irish would get it: — the Rents of the Estates in Ireland would rise; and then the Money would soon find its way into England. Besides, the Irish might be incorporated into the English Parliament, and make one Nation with ourselves, bearing an equal Share of Taxes, and so easing England at the same Time that Ireland is enriched. But more of this hereafter.

IX. WANT of a less expensive Way of Repairing our Roads; Want of more Navigable Rivers and Canals, are a very great Disadvantage to England, in Comparison of France.— Every one must be sensible of the heavy Tax, which so many Turnpikes lay upon Trade; and how bad even the Turnpike Roads are in many Parts of the Country, distant from London. We have no Canals to open a Communication between City and City, River and River, though our Country is much better adapted for them than France.

X. WE

the Case, Laws and Restrictions will signify nothing. If we have a Mind to prevent the Irish sending their Wool to France, we must make it their INTEREST to keep it at home; which can never be done, but by permitting them to manufacture it themselves, and export it to any Market they can.

X. WE labour under a very great Disadvantage, as most of our Leeward Islands are now worn out, and indeed were never fo fertile, or of so lasting a Soil as the French; therefore they require a greater Expence to cultivate them: So that our Sugars must come the dearer to Europe. Besides, as we use so much for Home Consumption, we have the Less to spare for foreign Markets.

XI. ENGLAND labours under a peculiar Disadvantage in Comparison to France, as its Colonies are not so much under the Command of their Mother Country, nor so studious of her Welfare. - In many of these Colonies several Manufactures are set up, and more intended to be erected, which will greatly interfere with the Trade of England. And we must expect that this Evil will not decrease, but increase by Time, unless an effectual Method can speedily be put in Practice, to divert the Thoughts of our American Colonies from these Pursuits, to some others, equally serviceable to them, and less detrimental to us. Befides, they not only fet up Manufactures of their own in Opposition to ours, but they purchase those Luxuries and Refinements of Living from Foreigners, which we could furnish them with. It is computed, that they are supplied with at least one third of these Articles

Articles from foreign Nations; amongst whom the French come in for the greatest Share.

XII. WE also suffer a further Inconvenience in not inviting Foreigners to travel into England, and spend their Money among Us; and in being too fond of travelling ourselves. -It is certain, England has as many Curiofities for a Foreigner to observe, as any Country in the World: The whole Island, and every thing belonging to it, being in many Respects dif-ferent from the Continent, and worthy the Attention of a Stranger. And even as to fine Paintings, original Statues, and Antiques, we have prodigious Collections of them in private Hands, though little known even to our own Countrymen, for want of a publick and general Catalogue. Moreover, our English Travellers in France and Italy, are continually making new Collections in order to carry home and embellish their own Country. And yet our Gentry are so strangers, the Servants expect so much Vails, and the common People are so rude and affronting, that very sew care to travel in such a Country.

XIII. THE high Price of Labour is another insuperable Bar to a large Trade.—The Causes of which are such as have been assigned already, viz. Electioneering—the corrupt Morals of the People—Taxes on the Necessaries

Necessaries of Life — Monopolies, publick Companies, and corporate Charters of Trades.

XIV. WE suffer a very great Detriment through the Want of Publick Inspectors, to see that our Manusacturers produce every Thing good in its Kind; that they give good Weight and Measure, and sold the worse Side outermost. And what is still worse, where such have been appointed, they have degenerated, through some unhappy Abuse, so sar as to increase the Evil they were intended to correct.

XV. ADD to all these, the Discouragements and Oppositions which the most generous Scheme will too often meet with from felfinterested and designing Men, who pervert the invaluable Bleffing of Liberty and a free Constitution to some of the worst of Purposes. In a despotick Kingdom, the Ministry have none to oppose them in their good Designs: But among us, let their Plan be ever so well calculated for the Publick Good, yet if it clashes with the private Interest of any particular Persons, trading Companies, or Boroughs, (as it necessarily must do) then it is opposed, under various Pretences, by the united Force of falle Patriots, who inflame the Populace with Words and Names, and blacken and mifreprefent the best Designs in the most malevolent manner.

BESIDES,

BESIDES, in an absolute Government, there is no Possibility of gaining Preferment by making one's self formidable to the Ministry. Whereas in England, it is the sure Road to it. A bold plausible Speaker in the House embarasses the Schemes of the Ministry, not because he thinks them wrong, but because he expects to be Bought of F by a Place, or a Pension. A News-Writer, or a Pamphleteer, puts every Measure of the Court in the most odious Light, in order to make his Paper sell the better, or to be thought considerable enough to be retained on their Side.

On the other hand, the Ministry are too apt to endeavour to quash a Motion, not because it was a bad one, but because it came from the Party in the Opposition. A good Motion, a publick-spirited and generous Proposal, would raise the Credit of the Authors of them too high with the People, were they carried into Execution, to the Detriment of the Ministry. Therefore salus sur, not salus Populi suprema Lex esto.

Thus it is on both Sides: And an honest well-meaning Person, whose Views are single, and who is conscious to himself of no other Attachment but the Good of his Country, can-

not but lament these pernicious Evils.—And the more so, as he must despair of seeing them effectually removed or cured, without introducing worse Evils in their stead, —unless Men were much bonester, and more upright than they are; which, it is to be seared, is not likely to be soon the Case.

CERTAIN

# PROPOSALS

For remedying many of the abovementioned Inconveniencies; and retrieving the TRADE and CREDIT of GREAT BRITAIN.

#### I. PROPOSAL.

O alter the Qualification of Voting, and to introduce a just Subordination among the People. -When \* Forty Shillings a Year was fixed upon as a Standard for a Voting Freeholder, it was

certainly more than an Equivalent to Twenty Pounds per Ann. of modern Rent. Suppose, now,

The very Recital of the Statute, which ascertained the Qualification of Voting-Freeholders, is the best Proof of the Reasonableness and Necessity of what is here proposed.

now, that Twenty Pounds per Ann. was the requisite Sum for a Freeholder, and Two Hun-

" Anno ociavo HENRICI VI. cap. 7. What Sorts of Men shall be Choosers, and who shall be chosen Knights of the Parliament.

WHEREAS the Elections of Knights of Shires, to come to the Parliament of our Lord the King, in maony Counties of the Realme of England, have now of · late been made by very great ourageous and excessive Number of People, dwelling within the same Counties of the Realme of England, of the which most Part was of People of small Substance, and of no Value, whereof every of them pretended a Voice equivalent as to such · Elections to be made, with the most worthy Knights and Esquires dwelling within the said Counties, whereby Manslaughter, Riots, Batteries, and Divisions among the Gentlemen and other People of the same Counties fhall very likely rife and be, unleffe convenient and due Remedy be provided in this Behalf: Our Lord the King confidering the Premises, hath provided, ordained and established, by Authority of this present Parliament, that the Knights of the Shires to be chosen within the fame Realme of England, to come to the Par-· liaments of our Lord the King, hereafter to be holden, ' shall be chosen in every County of the Realme of Engand, by People dwelling and refident in the fame Coun-' ties, whereof every one of them shall have Land or 'Tenement, to the Value of Forty Shillings by the Year at least, above all Charges; and that they which shall be fo chosen, shall be dwelling and resident within the fame Counties. . . . . Provided always, that he which cannot expend Forty Shillings by the Year, as afore is faid, shall in no wife be Choofer of the Knights for the · Parliament.'

HERE we find the same Cause tending to produce the same Effect in former Times, as in the present. Only there is this Difference, that the Evil could not be near fo great then, as now; because the common People were

dred Pounds Stock in Trade for a Tradesman, to qualify them to vote; the immediate Confequence would necessarily be, that the Manufacturing Part of our Nation would not be called from their Work, to run roving after every Electioneering: A proper Subordination would be effectually introduced: The Laws against Idleness and Debauchery might be executed; and Smuggling in a great measure suppressed: And all this without running the Risk of disobliging such Voters, and losing their Votes. Moreover, when Things were put upon such a Footing, it would be a Matter of Honour and Reputation to have a Vote; and consequently, the Voter would pique himself more upon his Integrity and Uncorruptness, than he now doth. He would be above that Bribery and Corruption, which appear so openly and avowedly on all Sides, at present, throughout the Kingdom. Likewise a Spirit of Emulation and Industry would be excited; and the Privilege of Voting would become a laudable Inducement to every Artificer, (not to get Drunk, or to take a pal-

used to much greater Subordination, and the Trade of the Kingdom was very inconsiderable, consequently could not have suffered by it in any Degree to what it doth at present. And yet, if such were the Reasons which induced the Legislature to pass the above-recited Act at that Time, how much more Reason have we to follow their Example now?—The present Value of Forty Shillings, is not a tenth Part of what they intended: Therefore, if we would keep up to the Spirit and Meaning of this Law, we should at least fix the Qualification at Twenty Pounds per Annum.

try Bribe, as at present is the Case) but to be frugal and faving, in order to raise himself to the Degree of a Voter. And many Artificers might accomplish this by a few Years Industry after they are set up. The Number also of the Poor would consequently be lessened; the Price of Labour reduced; and the Persons themselves, who would be debarred of Voting by fuch a supposed Bill, much bappier, much 'richer, and quieter than they now are. Add to this, That a Militia for Land Service, and a Register for the Sea Service, might then be introduced, if it was judged expedient; whereas at present it is impracticable; because such a Power, wherever lodged, would infallibly be applied to the bad Purposes of influencing Votes at the Time of Elections.

#### II. PROPOSAL.

To erect certain Courts in all manufacturing Places of the Kingdom, where the chief Dealers themselves shall petition for them, with the Title of \* GUARDIANS of the Morals of

\* The Complaints against the Morals of the manufacturing Poor become louder every Day, and certainly demand, if anything doth, the ferious Attention of the Legislature. Combinations of Journeymen to extort exorbitant Wages. - This Money spent in Drunkenness and Debauchery, fo that they are the Poorer rather than the Richer at the Week's End, by the advanced Price,their Unfaithfulness to their Trust, - the Badness of their Work, whenever their Masters have a great Demand, and

the manifacturing Poor. Perhaps something to the following Effect, might suggest Hints to be improved upon.

THE

dare not turn them off,—the increasing Number of the Poor; these, and many other Articles of the like Nature, are the Complaints  $ju/ll\hat{y}$  made on this Head.

A certain very ingenious Gentleman, and himself a great Manusacturer in the Clothing Way, has attended to them with great Assiduity; and is engaged in a Scheme which he intends to exhibit to the Publick, of a very fingular Nature, for the Resormation of these Abuses. He has carefully observed, That in exceeding dear Years, when Corn and Provisions are at an extravagant Price, then the Work is best and cheapest done:—but that in cheap Years, the Manusacturers are idle, Wages high, and Work ill done. He has carried these Observations through many Years back; and confirmed them by the Testimony of several great Writers upon Trade.

THEREFORE he infers, That the high Duties, Taxes, and Excises upon the Necessaries of Life, are so far from being a Disadvantage to Trade, as Things are circumstanced among Us, that they are eventually the chief Support of it:—and ought to be higher still, in order to oblige the Poor either to WORK or STARVE.

Some Things may certainly be faid in favour of this Scheme. But an humane and compassionate Man cannot but be forry, to see the Morals of the Poor so very corrupt, as to oblige any one to think of fuch an Expedient. In the mean Time, as much may be faid against it; and as it would involve the Innocent as well as the Guilty in the same Punishment; perhaps some other Expedients would better answer the good End proposed, and not be liable to the same Objections. If the Qualification for Voting was settled as in the first Proposal, and Court Guardians erected, as proposed in this; and Foreign Manusacturers naturalized, in order to keep down

THE Qualifications of each Member of this Court to be as follows; 1st, That he employs not less than twenty Manufacturers on his own Account, the greater Part of the Year. By this Regulation, the most eminent, as well as the most concerned, will be the only Persons 2dly, That each Member subadmitted. scribes a certain Sum, suppose two Guineas at least, every Year towards the good Purposes hereafter to be mentioned: but that they be admitted to receive the Legacies and Donations of others. 3dly, That each Member be a married Man, in order to fet the good Example here recommended.

THE Aim of this Court to be, To discourage Vice, Idleness and Debauchery, - and to encourage Industry, Probity and Fidelity, in the lower Class of People.

THE Means to effectuate these good Defigns, with great Submission, perhaps may be as follows;

IR, BY

the Price of Labour, and prevent any Combinations among our own People, (as shall be mentioned in a succeeding Propofal) perhaps the Morals of our Poor would be as unexceptionable, and the Price of Labour as cheap, as in any other trading Country.

But which ever Scheme is right, or if neither are, the Affair itself deserves the most serious Regard of every one, who wishes well both to the Souls and Bodies of his Fellow Creatures, and the Good of his Country.

1st, By removing all Temptations, as much as possible, out of the Way; to which End, this Court Guardian shall have the sole Power of judging, How many Alehouses, &c. are ne-cessary to be licensed in their respective Districts that is, They shall not have a Power to exceed the Number allowed by the Justices, but to lessen them as much as they please. Neither shall they have the Power to nominate the Persons to be licensed; but after they have delivered in their Lists, the Justices shall nominate,—unless the Justices delay to do it for a Month after Delivery: in such Case, they shall be impowered to nominate themselves. They shall likewise have the Power of levying a certain Fine by Distress of Goods, or in Default of that shall inflict corporal Punishment, on all Persons who keep Cock-Pits, Skittle-Allies, and all such Places for the Resort of the common People, within their District; also those who set up Stages for Cudgel-Playing, &c. or Booths for Horse Races, or bring Liquors, Cakes, Fruit, or any like Temptations, to draw People together. They shall also be impowered to expel out of their District, all such common People as cannot give a good Account of themselves, by what means they subsist; and shall particularly be enabled to remove such Women, as are suspected to have a bad Character, unless they can clear themselves from the Imputation, by the Oaths of three at least of their

their Neighbours of good Substance and Repute, that they believe them to be innocent of the Charge, and esteem them to be honest, chaste, and sober Persons.

2dly, THESE Courts Guardians shall endeavour to encourage Industry, Probity, and practical Religion, by the following Methods; viz. By allowing Forty Shillings apiece to any young Couple going to be married, that can make it appear by the Testimony of their Masters, that they have faved Three Pounds and upwards, by working in their Service; and have behaved well. If each of these can produce such a Character, then this Forty Shillings to be made Four Pounds. But not to be paid till a Year and a Day after Marriage, during which time they are still to behave well.—By allowing also something discretionally to those, who are over-burdened with large Families, or are Sick, whose Characters are known to be good: -By prefenting also a few good Books, to the remarkably diligent and industrious. Suppose these were the Bible, and Gastrel's Christian Institutes; which are Books that no Perfons of ever so different Religious Perswasions can object to. If these were neatly Bound, gilt on the Back and Leaves, with a Cloth Case. and had stampt on one Side in Gold Letters,

THE HAND OF THE DILIGENT MAKETH RICH;
And on the Other,

TO THE PRAISE OF THEM THAT DO WELL;

## -58 AN ESSAY ON TRADE.

they would be kept as Family Pieces, and Trophies; and might excite the same laudable Emulation in their Posterity, which it had done in themselves.

N. B. The District here so often mentioned, is supposed to be ten Miles round from the Town or Place appointed for keeping this Court. The Court to sit every Month, at least, for the Dispatch of Business, wherein the Attendance of three Members will be sufficient: and every Quarter a general Meeting, which must be composed of seven.

THESE are only offered, with great Submission to the Publick, as *Hints* to be improved upon. The *Importance* of the Affair requires that *some* Expedients should be *tried* without *Delay*. If these are judged improper, the Author would exceedingly rejoice to see better in their room; and those effectually carried into Execution.

#### III. PROPOSAL.

To incorporate both the British Isles together, and to make one Kingdom in all Respects, as to Parliament, Trade, and Taxes.

This Proposal of Incorporation has long been the Wish of every generous disinterested Patriot of both Kingdoms. And indeed inexpressibly

expressibly great would be the Benefit on both Sides. The Irish would share in the Advantage of our Trade, and we in theirs. By permitting them to get rich at the Expence of the French, they would be enabled to ease Us of the Burden of the worst and beaviest of our Taxes: - whereas at present, the French, thro' our own unaccountable Infatuation, get rich at their Expence. By this mutual Benefit, neither Kingdom would be looked upon as Foreigh to the other: but the Goods of both would be imported Duty-free, or perhaps be confidered only as coming Coastwife. The bostile Prohibition against wearing, or using the Produce of either Kingdom, would be repealed; and all that unnatural War between the Commerce of the two Nations, would be at an End: - which would be attended with these further happy Consequences, That many of the Necessaries of Life would be imported cheaper into England, than they now can be purchased; a great Advantage this to the Merchant and Manufacturer: - and many more of the Luxuries, Ornaments, and Delicacies of Living, would be exported from hence into Ireland. For most certain it is, That in proportion as Ireland grew rich, they would take the Lead for the richest of their Cloaths, Furniture; Plate, Jewels, Equipages, &c. &c. from England. Likewise the Inducements of being near the Parliament, the Court, the Publick Funds; &c. would bring many more Irish Families to vefid:

### 60 ANTESSAY ONYTRADE.

reside, and spend their Fortunes here, than now do. In short, whatever Wealth Ireland would draw from other Counties by its Produce, Manusactures, and happy Situation; all that would continually center in England.

But here, methinks, I hear SELF-INTEREST making an Outcry, "They would run away with our Trade." But pray let me calmly ask, Who would run away with it? or where would they run to? Why truly our own People, our own Countrymen, (who may as justly be called fo, as the Inhabitants of any neighbouring County, and are some of the best and most faithful Subjects the Government has) would perhaps carry some part of a Manufacture from Us to themselves. — But what Detriment would this be to the Publick? The People of York-Shire have done the very same Thing by Glocestersbire and Wiltsbire. Let us therefore have a Meeting of the Clothiers of these two Counties to petition the Parliament, That the Yorkshire Looms and Mills may be all broke and destroyed: For they have run away with our Trade. — This is so ridiculous and abfundial Proposal, that I believe there is no Person living, but must fee and feel it to be fo. And yet let me ask, Is not this the very Case with respect to the Objection against incorporating. with Ireland? Or if there be a Difference between the two Cases, I should be glad to know. wherein it confifts? Is Ireland to be looked

upon as a distinct Kingdom? - more is the Pity: For as the two Kingdoms have but one common Head, - one common Interest both in Church and State, -the same Friends, - and the fame Enemies; they ought to have been long fince confolidated together. -But allowing it to be called a distinct Kingdom at prefent, till it is united :- so is Yorksbire a distinct County, and was formerly, in the Times of the Heptarchy, a Kingdom likewise distinct from the two Counties above mentioned. Is Ireland a great Way distant from England? Yorkshire is at a greater Distance-still from the Counties above mentioned. -And the Communication between them is not fo easy by Land, for the Purposes of Commerce, as the other is by Sea.

" But Ireland is more advantageously situ" ated for the Trade to the West-Indies:
" Therefore ——" Therefore we must deny
our own People the Benefit of Trading, BECAUSE
they are advantageously situated for carrying it
on. This is a weighty Argument. Bristol, for
Instance, is better situated for the Irish Trade
than London; therefore let us Londoners petition, that the Port of Bristol may be locked up.

It would be an endless and a tedious Piece of Work to wade through such gross and palpable Absurdities. One Thing is plain and obvious, that Self-Interest, the Bane of all Publick

Publick Good, is driven to bard Shifts, in order to cover such Views as the dare not openly avow. If England itself was divided into two Kingdoms, one comprehending all the South, the other all the North Side of the Thames, and there were bostile Prohibitions against importing certain Sorts of Goods from London to Southwark, and vice verfa; and bigh Duties upon all the Rest: Many Individuals on both Sides, would find their own private Interest in upholding the Division, and would cry out, upon any Proposal being made for an Union - These Foreigners will run away with our Trade - They are better situated than Us - Our Trade is in Danger. But would this Cry weigh with upright Men on both Sides, who had the Welfare of the Community truly at Heart? - If it would not, what shall we think of the same Argument, when urged against Great Britain's incorporating with Ireland?

# PROPOSAL.

doms, as above proposed, By Degrees to lay, the English Taxes upon Ireland; and to ease the English of the most burdensome of theirs in the same gradual manner. — Suppose, therefore, the first Year, that the English Laws of Excise, and the Duties upon French Wines and Brandies; are extended to Ireland; then England

land might be eased of the Salt Tax, the same Year, or the following one. If in the second Year Ireland were charged with the Stamp and Paper Duties, England might be discharged of the Tax upon Soap and Candles. If in the third, a Tax was laid upon the Window-Lights in Ireland, the Coal Duties might be taken off from England. If in the fourth, the Tax was laid upon Coaches, this would enable the Parliament to discontinue the Duty upon Leather. Lastly, If in the fifth Year, Ireland was subjected to a Land-Tax, this would ease the Lands and Houses of England of at least one third of their Burden.

### V. PROPOSAL.

To set up Woollen and Silk Manufactures in the West Coast of England, and South-West of Ireland, (supposing the former PROPOSALS to take Place) in order to rival the French.

THE Price \* of Labour is as cheap in those Parts, as any where in France; and when a proper

\* THE Price of Labour at the Places under mention-

ed was given me, as follows:

AT Life, the Wages of Journeymen Stocking and Camblet Weavers, about 24 Sous per Day, i. e. about 13 Pence English; a Soud being a little more than an Halspenny.

Abbeville and Amiens: Journeymen Weavers, and Cloth-Workers, according to the Nature of the Work,

proper Subordination is introduced; the Temptation of Electioneering removed; the most grievous of our Taxes abolished, and a Trade set open; it is probable, that Labour might be still much cheaper: By which means, the French might be cut out of a great deal of their Levant, and Spanish Trade.

MOREOVER, when the Woollen Manufactures come to be effectually established in those Parts, it will be next to impossible to

and their Dexterity, from 20 to 50 Sous per Day.

Ditto: To Women employ'd in the Manufacture, not

more than 12 Sous per Day.

Hedgers and Ditchers in the Country, about 10 Sous per Day.

Nantes: Journeymen Ship-Carpenters, about 30 Sous

per Day.

Castelnaudary: Labourers mending the Canal of Languedoc, by the Job, earn about 12 Sous per Day.

Nifmes: Journeymen Weavers in the Silk and Stock-

ing Trade, from 30 to 35 Sous per Day.

Marseilles: Journeymen Taylors 30 Sous per Day.—Ditto: Carpenters, 30 ditto.—Silk-Weavers, from 30 to 35 Sous per Day.

Toulon: Journeymen Carpenters in the King's Yards,

30 Sous per Day.

Lions: Journeymen Workmen have several Prices, according to the Silks, Velvets, Gold Stuffs, Lace, &c.

&c. from 50 to 100 Sous per Day.

LAND-CARRIAGE of Goods from Marfeilles to Lions, and vice verfa, (230 English Miles) which is often done either for Speed, or Safety; the Rhone being difficult to mount, and fine Goods may take Damage in going down, per Hundred, (108 lb. English) from 6 to 7 Livres. N.B. A Livre is 10 Pence Halfpenny English.

run the Wool to France: For both the Wool itself will bear a better Price, so as not to make it worth their while; and each Manufacturer will be a kind of Centinel, to prevent its being exported unmanufactured. This therefore, I humbly conceive, is a much better Scheme of Prevention, than that of the Reverend Mr Smith, in his Memoirs of Wool, in which he pleads for a Liberty of exporting Wool, under the Qualification of certain Duties and Restrictions. For it answers all the Ends proposed by him in that Scheme, and is subject to none of those Inconveniencies which his is generally supposed to be attended with. This Gentleman, - for his indefatigable Labours in collecting all that has been ever faid upon the Subject, and presenting it to the Reader in one View, - for his judicious Remarks, and the Pains he has taken in endeavouring to correct many popular Errors, which had too generally prevailed, - most justly deferves the univerfal Thanks and Applause of his Country.

But among the several Requisites necessary to enable us to rival the French in the Levant and Spanish Trade, one, and which ought principally to be regarded, is, To lay the Trade open. Wherefore I now proceed to the

#### VI. PROPOSAL.

Viz. To lay open and extend our narrow K and

and restrained Companies; beginning with the Turky and Hudson's Bay Companies: which hurt the Trade of Great Britain more essentially with respect to France, than any other Company can do.

HERE, again, that watchful Dragon, Self-Interest, will be apt to take the Alarm; and I do not expect any thing I can fay will have Charm enough to lay him asleep. — Many specious Reasons have been offered in favour of exclusive Companies; which, though they convinced none but those that were interested in them, yet they served to perplex a Debate, by drawing off Mens Attention from the true Merits of the Cause.

I SHALL endeavour therefore, for the sake of such as have bonest Hearts, and publick Spirits, to give an impartial State of the Case, with as much Clearness and Conciseness as I can.

FIRST then, I will allow, that in certain Cases, and at certain Junctures, exclusive Companies might have been a prudent, and even a necessary Institution, calculated for the publick Good; as,

1st, In order to introduce Arts, Sciences, and Manufactures among a barbarous and savage People: Which was the Case with the late

late Czar of Muscovy. It was necessary for him, in his Circumstances, to give so extensive Privileges to Merchants and Tradesmen to come and settle in his Country, as would overbalance the Temptation of Self-Interest for residing any where else.

2dly, In order to induce skilful Artificers to come and instruct an ignorant People; which undoubtedly they will not do, unless upon a valuable Consideration. — This was the Case with our English Princes about Two hundred Years ago, in granting so many Privileges and Exemptions to the Flemish, and other foreign Manusacturers.

habitual Laziness of a People, by bringing Examples of Industry and the good Effects of it, before their Eyes. This, among other Reasons, is much the Case with the Spanish Court at present, in being so desirous of introducing foreign Manusacturers into Spain.

4thly, In order to have a large Capital, sufficient to embark in any hazardous Undertaking, which may call for great Sums to be expended, before the Project can be brought to bear, and the Trade to answer. And whereas no private Persons by themselves, or voluntary Associations, can be supposed equal to such an Undertaking; therefore when Individuals

duals refuse or decline, it is but reasonable that those who adventure in a joint Stock should be incorporated, and have a Privilege excluding all others from interfering in this new Branch of Commerce, till the Adventurers are sufficiently paid for the Risks they run, and the Expences they were at.

Now all these are very good and sufficient Reasons, where they hold, for the establishing of exclusive Companies. For it is better to have the Trade of an exclusive Company, than no Trade at all. And in process of Time, according as the Reasons for continuing them, do cease, the Trade should be LAID OPEN.

e on comin

gthly, THERE is also another Reason in certain Governments, whose Credit is not esteemed good with the People, for the erecting of such Publick Bodies. And that is, For the Sake of borrowing Money at an Exigence, when Individuals will not trust them. This, I believe, was the Case with our own Government in former Times.

But 6thly, There is still a further Motive remaining, which, though a very bad and scandalous one, yet it is to be feared, hath had the greatest Share in erecting Monopolies of all the Rest. And that is, in plain, but very expressive English, Jobbing. And most of the Charters for Monopolies, which were so plenti-

plentifully granted in the Time of King Charles the Second, whose Pleasures made himself and his Courtiers very needy of Money, betray the Original from which they were derived.

—Particularly that famous one for the Hudson's Bay Company, which is a Grant without any Bounds or Limits of Seas, Mountains, Rivers, Degrees of Latitude or Longitude; and therefore, if valid, might impower the Company to challenge all the Lands of America, which were not disposed of by prior Grants, as well as the Coasts on Hudson's Bay.

But enough, I hope, hath been faid, as to the Reasons for the Institution of exclusive Companies.

My second Attempt, therefore, will be to shew, That none; of these Reasons do hold in our present Circumstances. — For if any of them do, let me ask which? Is it the First, Second, or Third? I believe the most sanguine Advocate for exclusive Companies, will not insist upon either of these. Is it then the Fourth?—This, I am aware, will be chiefly insisted on.—Not that it can be pretended at this Day, That private Adventurers are either unable, or unwilling to engage in any Trade carried on by a Company, were it laid open; but the Pretence is, That a Recompence should be made them, before they are dissolved, for the Expences they have been at. And doubtless

less, if the original Adventurers, or their Representatives, can make it appear, That they have NOT YET received a reasonable Profit for the Money advanced by them to make a Capital Stock, the Publick will confider them so far, as to make good the Deficiency. They have a Plea of Right and Equity for this. — But they have no Colour of Right for any imaginary Value, which they may put upon their Stocks. Nor is the Publick concerned to regard it: Nay, the very Plea defeats itself: For if their Stocks have been really fold in the Market greatly above Par, this is a plain Proof, that they have received a reasonable Profit already, for the Money advanced to make a Capital. - And therefore ought not to have any farther Compensation.

To proceed: As to the Fifth Reason for exclusive Companies, there can be no Pretence for it any longer in our Times. For it is well known, the Credit of our Government is so good, that Individuals rather chuse to lend their Money upon Publick, than private Securities.—And that they do it even on cheaper Terms.

WHEREFORE, lastly, If these Nusances to a Free Trade, and the Publick Good, shall still continue, it is too plain, that they will owe their Preservation to the same Cause that gave them Birth, viz. A Job. — But that I may express

express my utter Dislike against them, in common with every other DISINTERESTED Man, who wishes well to the Good of the whole Community, I shall go on,

THIRDLY, To point out a few of the principal Evils, and destructive Consequences attending them.

In the 1st Place, These exclusive Companies cannot trade, if they were inclined, upon so easy Terms, as private Adventurers would do, were the Trade laid open. So many Directors, Supercargoes, Storebouse-keepers, Factors, Agents, Clerks; - and all the Pickings of their several Dependents: - so many Fees, Sweetnings, &c. from the Manufacturer, or under Merchant, that bis Goods may have the Preference to others: — and the Expences of carrying many Sorts of Goods from distant Parts of the Country, where they are manufactured, up to the Metropolis, there to be Shipped off, instead of being exported from the next convenient Port: - Expences of Warehouses, &c. &c. make it impossible for any Corporate Company to Trade upon an equal Footing with private Adventurers: - and consequently of extending their Dealings so far as if the Trade was open. Pror this Reason it has been always found, That if private Adventurers shall be permitted to engage in the same Trade, they will infallibly carry it away from the Company.

Company. \* And upon the fame Principle, If there are two Nations, Rivals in the fame Trade,

\* WE have a convincing Proof of the Truth of both these Observations, 1/t, In the Case of the African Company, and the Bristol and Liverpoole Traders: 2dly, We have another, and a woful one, in that of our English Company trading to Turky, and the French trading thither also from Marseilles. Our English Company had formerly all the Trade for Cloth to the Levant: which being obferved by the French, ever jealous of the English Commerce, they set up Manufactures of their own in imitation of them. These Manufactures still bear the Name from whence they were derived, viz. Londrins premiers, - Londrins seconds, - Londrins larges. - But they have so supplanted the Trade of London, because it is in the Hands of an exclusive Company, that the English have little or nothing of a Trade, comparatively speaking, in those Parts. Whereas the French shipped off to the Levant, the very Day the Seas were free, after the Peace, July 13, 1748, FOUR THOUSAND Bales of the abovefaid Cloth: Each Bale, one with another, worth about 1200 Livres. That is about 210,000 l. Sterling in all.

If it should be said, That the French have gotten this Trade from Us, not so much on the Account of the Disadvantage we labour under from an exclusive Company, as the Advantageousness of their Situation. I have this surther Remark to offer; viz. That if the Trade was open, We have many Advantages, which they have not, to counterbalance the Inconvenience of our Situation.—They are obliged to import most of their Wool from Turky, Spain, or Africa, into Marseilles; and to carry it chiefly by Land-Carriage from thence to Carcassone, about 130 Miles.—Then to carry the Clothback to Marseilles: which cannot be done at a small Expence. They are also obliged to setch Tin, Lead, and Shot from England, and Spices from Holland, for the Turky

Trade, that Nation which permits a free and open Trade, will always be superior to the other, which confines it to a Company: -other Circumstances supposed to be equal, or nearly so.

2dly, As they cannot trade so cheap as private Adventurers, even were they inclined, They must therefore necessarily omit many leffer Branches, as not answering their Expense, which in the Hands of Individuals would turn to good Account, and perhaps give Bread to Thousands of Families. These Articles are called leffer, not because they are less extensive, for perhaps in that Respect they may be the greatest, but because they are less gainful; which therefore a Company must leave untouched, unless they will trade to their own loss.

Bur

Turky Markets; in all which we have most certainly the Advantage over them. And therefore, if we had Woollen Manufactures erected in the West of England, and the South-Well of Ireland, (according to PROPE-SAL V.) where Labour is as cheap as in any Part of France, where we have Wool on the Spot, - and when manufactured, might be immediately exported, without being carried up to London; - where Tin, Lead, and Spices, may be had upon much easter Terms than they can at Marfeilles: I fay, with all thefe Advantages, at d an open Trade, we could more than counterbalance any Advantage, that the French can draw from the Situation of Marfeilles: and then we might import the rate Materials of Silk, Camels Hair, Skins, &c. much cheaper than at present, to the Emolument of Theisfands of Families.

But, 3dly, It must be observed, That the Views of every exclusive Company are quite of a different Nature from what was supposed above. For they do not, and never did, defire to trade as cheap as others, but as much dearer as they can. The Charter itself secures them from any Competitors; and therefore they have no need to seek to get the Trade to themselves by selling cheap. But on the contrary, wherever they have the Market to themselves, they will both sell and buy at their own Price.

THIS is the greatest and most intolerable of all the Evils of Monopolies. It is a Prostitution of the Trade and Welfare of the Publick, to the merciless Ravages of greedy Individuals. We may the better judge of the mischievous Effects of all Monopolies, by attentively obferving the indefatigable Pains, and great Expence, which every felf-interested Person chearfully submits to, in order to acquire it, even in a free Trade. For if he has a large Capital, he will fink some part to undersell another Adventurer, who has less, in order to BREAK HIM: and then, when he has done that, he will raise the Price of his Commodities again, fo as to make himself soon whole for the Losses he had incurred. Now if a private Merchant can find his Account in lofing fo much Money, in order to get at a Monopoly in a free Trade, what exerbitant Gains must an exclusive Com-

pany

AN ESSAY ON TRADE. 75 pany make, who are fenced in by Law, and have none to rival them?

in this latter Case. — For whereas in the former, either the Engrosser himself, or his Family, will retire from Business, after they have amassed great Riches; by which means the Trade will again be opened.—In the latter Case, viz. that of a Company, One succeeds another upon the same Plan of preying upon the Publick, without Intermission. So that neither the Death, or exorbitant Wealth of one Set of Proprietors, give Us any Prospect of being delivered from the Power and Oppression of the next.

But the Affair of a Publick Company (viz. the Hudson's Bay) was, last Sessions, brought upon the Carpet before the British Parliament.—
Let us see, therefore, What they had to say for themselves, when called upon by their Superiors,—and when, doubtless, they said all they could,—and gave every thing the best Colouring.

IT appears, therefore, from the Papers, which the Honourable Committee, appointed to examine into the State of their Affairs, were pleased to make publick, for the general Information of the Kingdom, That the following Particulars were proved to the Satisfaction of the

the Committee,—and even were not contradicted by the Agents for the Company.

Ist, THAT the Company always have discouraged the settling a Colony in any Part of their vast and boundless Empire.

2dly, THAT they discouraged the Company's Servants from conversing with the Indians,—whereas the French promoted an Intercourse with each other as much as possible.

3dly, THAT the Climate is much warmer, and the Soil better, higher up the Country, than towards the Sea-fide.—Yet no Settlements attempted.

4thly, THAT the French have extended their Settlements more and more: and where-ever they have come near the English, they have carried most of the Trade from the English,—not vice versa.

5thly, THAT the Forts \* pretended to be erected and garrifoned, are of no Strength, were they

\* A great Stress is laid by the Advocates for exclusive Companies, on the Necossity of erecting Forts in certain distant Countries, for securing the Trade to ourselves;

—Therefore they infer Companies ought to be established in order to support this Expence. A strange Argugument this! And a stranger Inference! For if Forts are necessary to be erected; against whom are they necessary?

they attacked by an European Enemy; and only serve to subject the Indians to the Command of the Company.

6thly,

necessary? Not against the People of the Country who are to trade with us. That is too abfurd. -We are to cultivate their Friendship, and ought to ingratiate ourselves by all due Acts of Kindness, into their Favour. But if these Forts are necessary to be erected, in order to keep the whole Trade to ourselves, and prevent other Nations from interfering with us; How came it then to pass, that we were some Years ago so alarmed at the Oftend Company, who had no Forts, and no Defign of attacking ours? Yet it is very plain, they could carry on a Trade, and even under sell the English East-India Company, notwithstanding their Forts. - If the Trade was now to be laid open, subject only to the single Restriction, That the private Traders should not come into the fame Ports or Harbours, where the Companies have Forts: - What would be the Consequence? Plainly this; That the Companies would be ruined: and the private Adventurers, though destitute of Forts, would get all the Trade from them. - If it is faid, That these Forts are necessary to guard and defend their Magazines against Thieves and Robbers; How then comes it to pass, that the East-India Company themselves have none on the Coast of China, where the People are said to be as thievish and dishonest as in any Place in the World? -And how do the Bristol and Liverpoole Traders maintain their Ground along the Coast of Guinea, where the Natives are much more warlike than in any Part of India. Besides, the Affair of Madrass has sufficiently opened our Eyes, as to the Use and Impertance of these pretended Forts, -and the National Advantage arising from

But even allowing, that they are necessary and advantageous to the general Trade of the Nation; What need then of a Company? Is it not a National Concern? If so, Why should they not be erected and supported

the staple Trade of the Company, might be attempted, were the Trade open, with the greatest Probability of Success. — Particularly the several Branches of the Fisheries: Whereas the Company, who know when they are well, as one of their Witnesses expressed himself, or in Words to that Effect, give themselves no Concern about the Matter.

7thly, THAT the Indians do actually take a great many more Beaver, than they carry to the Factories. — Not finding it worth their While to bring more to trade with.

Quantities, not any thing so large as they take in Hunting, were they desirous,—because their Canoes, deeply loaden, are not able to withstand the Waves and Storms they may meet with upon the Lakes,—because they are forced to unload very often, and carry the Skins upon their Backs, on account of the Falls and Currents; which creates much Fatigue and Labour, and Loss of Time:—because also they are obliged to hunt as they travel, for their daily Sustenance; which Article alone causes a Delay of a Fortnight, and longer, in going

fupported at a National Expence? Take the Argument therefore either way, What Reason is there for an exclusive Company?

the

AN ESSAY ON TRADE. 79 the Space which might be gone in three Days.

But, 9thly, all these Inconveniencies might be easily remedied, - by erecting a Fort about Sixty Leagues above York Fort upon Nelson River, upon a Fork, where the River divides, - by making a Settlement about Eighty or Ninety Leagues above that, upon the Lake of Pachegoia, - and by introducing our European Conveniencies of Magazines and Carriages. By these Means, all the Beaver would be bought, which the Indians now make use of otherways, as not answering to bring it to the Forts, - the Time might be faved, -and the French driven to relinquish all that Trade. In short, both our Exports, and our Imports, would be prodigiously increased; and many Tribes of Indians would, in that large Tract of Country, be brought to trade with the English, who have yet scarcely beard of the English Name.

So many important Particulars alledged,proved, -and even not contradicted, one would think, would have been sufficient to have carried any NATIONAL CAUSE, against the private Interest of a few Individuals.

But - Let us in the next Place see, What they and their Friends had to offer in Justification of their Conduct, - Pretending, that

they carried on a Trade equally beneficial to the Nation, as if the Trade was open.

THE 1st Thing alledged, was, That they buy all the Beaver which is brought them;—and if more was offered, more they would buy.

THIS may be very true; and yet no ways inconfistent with the Charge summed up in the above-recited Particulars, against them.-The Indians, as savage as they are, have the NATURAL LOGICK of feeling when they are well, or ill used, as well as other People: And if they find better Treatment in one Place than another, will go to the best, and have as little Dealings with the worst, as they can. Nothing but absolute Necessity will oblige them (or any People) to bring their Goods to a Market, where they expect beforehand to be ill used. - And for that Reason, they will bring as little as they can. But when they have brought them, Necessity obliges them to sell for what the Purchasers will give. It may therefore be very true, that the Company buy all the Furrs that are offered them. - If they did not give half as much in Barter as they do, they would buy all; because it would not be worth the Indians while to carry them back; and because they greatly wanted European Goods. But these Indians would seek another Market against the next Time, if they could; and would bring no more Goods to the Company,

## AN ESSAY ON TRADE. 81 pany, than absolute Necessity obliged them.

But, 2dly, It was alledged, That if more Goods were given to the Indians in Exchange, they would not bring more Beavers; because they are an idle, lazy Race of People; and, having no artificial Wants to gratify, have no Ambition to spur them on to take more Pains. - It is true, They have not fuch artificial Wants as We have; They do not want fumptuous Houses and Gardens, rich Furniture, or Coaches and Chairs: - But they want Beads, Bells, little Looking-Glasses, Rings, and fuch Trinkets; (befides many Articles of their Cloathing, Bedding, Hunting, Fishing, and Fowling) and are as impatient to be gratified in these Respects, as we can be in ours. In these Things, therefore, they are as covetous and ambitious as the Rest of Mankind, -take as much Pains to acquire them, -and repine and murmur at the Factories, when they have not as much for their Commodities as they think they deferve. Besides, it should be remembered, that Hunting is rather a Diversion with them, than a Toil; and that, in Fact, they do take a great deal more than they bring down to the Forts. -- What they confider as a Toil, is not the bunting Part, but the being obliged to be the Porters of what they have taken in Hunting, down to the Factories; and yet be paid fo little for their Trouble.

M .

BUT,

But, 3dly, As to the Charge against them, of Exporting so little of our own Manufactures; it was said by their Advocates, That if Five Thousand Pounds worth of Goods bought all the Furs the Indians had to sell, that \* Sum was as good as Ten Thousand Pounds. Nay, it was better; because thereby Five Thousand Pounds was saved to the Nation.

\* THERE seems to have been a Fallacy used in this Argument. - If the Barter or Exchange with the Indians had been in Bullion, the Argument would have held good; and so much Money would have been faved to the Nation. But as it was all in our own Manufactures, i. e. the Labour of our own People, the Diminishing of such Exports, is in Fact the Diminishing of our own Manufactures, and defrauding the Nation of fo much Labour, whereby the Hands employed in those Manufactures must become a Burden upon the Publick, -or fleal, or flarve, or fly their Country. & The only Limitation which ought to be put upon the Quanvity of our own Manufactures, to be exported, is what the Nature of the Thing will of itself put upon them; viz. To export no more than is confistent with the reafonable Gains and Profit of the Exporter. If he can afford to export Ten Thousand Pounds worth of English Manufactures, where an exclusive Company would export but Five Thousand; it is for the general Good of the Country, that he should do it. And all Trade ought to be laid free and open, in order to induce the Exporters to rival each other; that the Publick may obtain this general Good by their Competitorship. But if they cannot afford to export fo much, there is no need to restrain them by Laws and Penalties, from doing that which their own private Interest will suggest to them f on enough.

THIS

THIS is a Reason, which is specious enough at first View, but will not bear the examining. First therefore, we deny the Fast; and infist upon it, That the Indians had more Furrs to fell, if the Company would have given a fufficient Price to the Indians, to have made it worth their while to have brought them down; or rather, If the Company had built Settlements and Magazines higher up, so as to have fuperseded the Necessity of the Indians coming down.

Bu'T 2d, We will allow the Fast, and argue with them upon their own State of the Case. Now if Five Thousand Pounds worth of Manufactures, in this Respect, is as good, nay better than Ten Thousand Pounds worth; for the same Reason, One Thousand Pounds worth is better still, because more would be faved to the Nation. Suppose therefore, that the Company, and every other Exporter in the Kingdom, (for every other has the same Right of arguing in this manner) suppose, I say, that all Exporters could lessen the Exportations of our own Manufactures by nine Tenths, and yet could get as much Money, or Effects in return, as they had before. What would be the Confequence? Why, only this, That thefe Exporters would become PRINCES; and the Rell of the Kingdom BEGGARS. They would be like a Spanish Don in Mexico, or Peru, who M 2 has

has a prodigious rich Mine, which required but few Hands to work it. And therefore he indeed would be a great Lord; but all his Wealth would not enrich the Neighbourhood, so much as a fingle Manufacture here in England, which being branched out into various Hands, gives a comfortable Subsistence to many Families.

It is not therefore Riches, confidered merely in themselves, that can make a Kingdom flourish, but the Parceling them out into proper Shares, by means of the Divisions and Subdivisions of different Trades. Without this, the more Riches in a few Hands,—the greater would be the Poverty of the Rest, and the more abject and dependent their State would be. And if all Merchants were no better Commonwealths Men than these, the Interior of a Kingdom would be very little prosited by Foreign Merchandize,—nay, in some Respects would be much the Worse.

In short, such an Argument as this, viz. to decrease our Exports, and increase their Price abroad, BEYOND what is necessary for the comfortable Subsistence of the Merchant and Manufacturer, Is only worthy of such a Cause. Were it put in Practice, it would get all the Wealth of the Nation into a few Hands,—it would turn nine Tenths of our Manufacturers a Begging,—and reduce them to the Necessity

of becoming Lacqueys and Footmen to such Exporters,—or starving,—or stying their Country.—It would sink the Value of our Lands, and bring swift Destruction on the Manufacturer, Farmer, Gentleman, and all Stations,—except the Exporter. He indeed would be GREAT,—and be alone. One may therefore the better judge of the Goodness of such a Cause, which required such kind of Arguments to support it. And so much for exclusive Companies.

### VII. PROPOSAL.

To encourage Foreign Merchants and Tradefmen to settle among Us, by a general Naturalization Act for all Protestants. And if it be judged improper to admit them into Offices of Trust or Power, it is easy to add a Clause, That these Privileges shall still be confined to the natural born Subjects.

HERE again the baleful Spirit of Self-Interest exerts all its Powers to oppose so publick and general a Benefit. — "What! must Fo-" reigners, and we know not who, come and take "the Bread out of our Mouths?"—An honest Cambro-Briton would have called all Englishmen Foreigners, and be knew not who. But waving that, —Let me calmly ask, What Bread do they eat? — and out of whose Mouths? It must be English Bread: The Corn grew here,

-was manufactured, was fold here. And the Foreigners, who eat it, earn it by their Labour, and pay for it. So far then, we hope, there is no Offence. The more Inhabitants there are to consume the Produce of our Lands, the better can the Farmer and the Gentleman pay their Shopkeepers and Tradesmen, and the more Manufactures will they consume in every Respect. Let us see therefore in the next Place, Out of whose Mouths do they take this Bread? If they introduce new Manufactures, or carry those already established, to greater Perfection, in that Case the Publick is greatly benefited, and no Individual can be injured. If they employ themselves only in such as are already settled and perfected, they will not defraud the Mouths of sober, frugal, and industrious Perfons, who may work as cheap, and can work as well as Foreigners. And therefore should be obliged to do both. It can be, therefore, none but the abandoned, debauched, and diffolute, who would chuse to be idle three or four Days in a Week, and want to have their Wages so high as to support this Extravagance, that can make such a Complaint? And shall they be heard? Shall we continue the Exclufion of all fober and industrious Foreigners, fo much to the National Disadvantage, merely to gratify the extravagant and unreasonable Humours of fuch Wretches as these? Surely, it is to be hoped, we shall pursue more prudent Measures, both for our Sakes, and their own.

But we are told farther, "That all English " Tradesmen, of every Denomination, are USED to " live better than Foreigners; and therefore CAN-". NOT afford to work or fell so cheap as they." -Be it so : Carry then this Argument to a Foreign Market, and fee whether it will perswade the Inhabitants of that Country to trade with you. A French, and an English Merchant, are Competitors, and Rivals to each other in the Markets of Spain, Portugal, Italy, Turky, and in short all over the World. The French Man offers his Goods at 20, 15, 10, or 5 per Cent. cheaper than the English. — Our Countryman is demanded, Why he will not sell his Goods as cheap as others? His Answer is, "That the " Manufacturers and Merchants live better in " England, than Foreigners do, and therefore he cannot afford it." This is a most persuasive Argument. — Undoubtedly he will fell much Cloth by alledging it. — He is asked again, Why they will not in his Country admit Foreigners, who work cheaper, to fettle among them, that so they may be able to trade upon an equal Footing with their Neighbours? To this he replies, "That Foreigners, and he knows " not who, ought not to come and take the Bread " out of the Mouths of the Natives." - Such kind of Reasoning must give them an high Idea of the Sense and Discernment of our Countryman. Let us therefore apply the Case to ourselves, and not argue in that abfurd and ridiculous Manner

Manner at home, which he is represented as doing abroad.

THE Admission then of Foreigners to settle in our Country, is so far from taking the Bread out of the Mouths of the Natives, that it is putting Bread into the Mouths of those, who, otherwise, in a short Time must have none. For the English must trade, at least, upon an equal Footing with other Nations, or not trade at all. — And then, when the not Trading at all is the Consequence, we shall indeed have no Foreigners to complain of, but we shall have a much sorer Evil:—and then, perhaps when it is too late, the most Self-Interested among us will be forry, that we had not admitted the frugal and industrious from all Parts of the World, to share the Gains of Trade with them, rather than to have none at all.

But let us try all this reasoning by plain Matters of Fact. The Town of Birmingham, for Example, admits all Persons to come and settle among them; whom, though they are Englishmen, the original Natives of the Place may as justly term Foreigners with regard to them, as we still other Nations by that Name.—" Foreigners, therefore, and I "know not who, came from all Parts, and "settled at Birmingham; and—took the Bread out of the Mouths of the original Natives." What then was the Consequence of this great Wicked-

Wickedness?—Why, within these sew Years, the Trade and Buildings of the Town have been prodigiously increased, and all the Estates for a great many Miles round, have selt the Benefit of this great Accession of Trade and Inhabitants. Birmingham, from being a Place of little Consequence, is now become one of the most flourishing and considerable in the Kingdom. And there is no Town, with its exclusive Charters, that can boast of so many skilful Artists, as this which admits all Comers.

MOREOVER, there are fewer Beggars in this Town, Manchester and Leeds, where all are free, than in any which has Companies of Trades, and exclusive Charters. So true and certain it is, That these Rights and Privileges, as they are called, do multiply the Numbers of the Poor, by damping the Spirit of Industry, Frugality, and Emulation, instead of diminishing them. A Manufacturer, who knows, that no Foreigner dares come in to be a Competitor against him, thinks himself privileged to be idle.

THE other Instance I shall mention, is the Case of the French Hugonots, who sled from the Persecution of Lewis XIV, and took refuge in England. But great was the Outcry against them, at their first coming. "Poor England would be ruined! Foreigners encouraged! And our own People starving!"

This was the popular Cry of those Times. — But the Looms in Spittle-Fields, and the Shops on Ludgate-Hill, have at last sufficiently taught us another Lesson. And now, it is hoped, we may say without Offence, These Hugonots have been so far from being of Disservice to the Nation, that they have partly got, and partly faved, in the Space of sifty Years, a Balance in our Favour of, at least, FIFTY MILLIONS Sterling.

In short, Self-interest apart, What good Reason can be affigned, why we should not admit Foreigners among Us? --- Our Country is but thinly inhabited, in Comparison to what it might be: And many hundred Thousands of Acres of good Land, in England and Wales, not to mention Scotland and Ireland, lie either entirely waste, or are not sufficiently cultivated; for want of Hands, and Persons to consume the Product. Our vast Commons, all over the Kingdom, and many of the Forests and Chaces, might be parceled out in Lots, to fuch of the Foreigners as chuse a country Life; and the Rest might find Employment, in some shape or other, in the different Manufactures. The Natives of England likewise do not increase so fast, as those of other Counties; our common People being much more abandoned and debauched. The marriage State also is not sufficiently encouraged among Us: and ten Thousand common Whores are not so fruitful (setting aside the Sin

of the Parents, the Diseases of the few Children that are born, and their want of a proper and virtuous Education) I fay, 10,000 common Whores are not so fruitful as fifty healthy young married Women, that are bonest and virtuous: By which Means, the State is defrauded of the Increase of upwards of 199 Subjects out of 200, every Year! - Add to all this, that it has been long observed by Men of Thought and Speculation, That more young Children die in England from the Birth to two Years old, than in any other Country. The Sea likewise, and our extensive Plantations, are a continual Drain upon us. And the manufacturing Poor at home are killing themselves, and, if I may be allowed the Expression, their Posterity likewise, as fast as they can, by those sure Instruments of Death, Gin and spirituous Liquors. For ALL these Reasons therefore, as well as on Account of lowering the Price of Labour, and preventing the Combinations of Journeymen, fo loudly complained of, and feverely felt throughout the Kingdom, it is humbly hoped, That those Persons who have hitherto opposed the Naturalization Bill, will see Cause to change their Sentiments; and will look upon it as highly useful and expedient, and productive of the greatest national Advantages. There are many thousands of Manufacturers, both in Silk and Woollen, in the South of France, all zealous Protestants, who would gladly come over, if they could learn, that they should meet N 2 with

with a kind Reception. As to the Difficulty of making their Escape out of the French King's Dominions, they would find Ways and Means to deceive even the Vigilance of their Governors, by retiring, as it were one by one, and removing under various Pretences, towards the manufacturing Towns in Picardy and French-Flanders, (from whence they could so easily pass over to us) were they sure of finding Protection and reasonable Encouragement. And as England and France are Rivals to each other, and Competitors in almost all Branches of Commerce, every single Manusacturer so coming over, would be our Gain, and a pour BLE Loss to France.

#### VIII. PROPOSAL.

To encourage a Trade with our own Plantations, in all such Articles as shall make for the mutual Benefit of the Mother Country, and her Colonies.

THE Reasons for this Proposal are very obvious and convincing:—and yet, as felf-interested Persons will be apt to start Objections, and raise Difficulties, it may be proper to expatiate upon them a little.

THEREFORE, it is necessary that we should encourage a Trade to our own Plantations for all Sorts of Naval Stores, in order that

that we may not be too dependent upon the Will and Pleasure of Foreign Courts, with regard to these necessary Things. Many, if not most of the Implements for Navigation, and consequently for a Sea War, are purchased from the feveral Nations bordering upon the Baltick. Suppose then that Sweden, Russia, or Denmark, should, for certain Reasons of State, or by the Intrigues of the French, lay an Embargo on these Commodities, at a Crisis when we greatly wanted them; -- or should refuse them to Us, and sell them to our Encmies; to what a distressed Situation would this reduce Us? and who can tell what might be the Consequences of it? And as the Politicks of Princes are ever fluctuating and changing, why should we put it in the Power of any Potentate to have such a Command over Us?

Countries is confiderably against Us, common Prudence will suggest, that we ought to turn it in our Favour, if we can. Now this we shall be able to do (or at the worst, bring it to an Equilibrium, which in itself is no disadvantageous kind of Commerce) if we can purchase the same Commodities in our own Plantations, which we used to import from these Countries. Besides, the Balance is not only against Us with regard to Sweden, but also the very Money which is drawn from Us by means of this loofing

ing Trade, is converted to support a French Interest, in Opposition to ours. But

adly, WERE the Case indifferent, where we traded, (which it is not) the natural Affection, which the Mother Country should have for her Colonies, where we have so many Friends, Relations, and Acquaintance, should determine Us to give them the Preference.

But indeed our own Interest is nearly and effentially concerned in this Affair: For,

4thly, UNLESS we promote a Trade with them, and take off the Growth and Commodities of their Plantations, they will be reduced to the Necessity of Offering them to Sale at other Market, or permitting other Nations to come and trade with them: The Consequence of which will be, that they will take the Product and Manufactures of these Nations in return. And indeed this is too much the Cafe at prefent: For one third, at least, of the Luxuries and Elegancies of Life, brought into our Colonies (as was observed \* before) is the Growth and Manufacture of other Countries, and principally of France. And as our Trade, particularly to some of the Northern Colonies, is growing less and less, this Evil must daily increase in the same Proportion. Moreover, sthly,

<sup>\*</sup> See the XIth Difadvantage of GREAT BRITAIN. Page 45.

5thly, UNLESS we can supply our Colonies with fuch Commodities and Manufactures as they want, by way of Barter for some of theirs which they can spare, -They will be obliged to raise those Things themselves. And feeing that many of the new Settlements on the Continent of America, are several hundred Miles up the Country, between, and beyond the Mountains; this Distance of Situation will increase the Necessity they are already under of manufacturing for themselves, - unless we can divert their Thoughts to some other Projects. Nay more, when once a Manufacture is fet up in those distant Regions, it will extend itself downwards; and the Inhabitants on the Sea-Coast will be supplied by their Neighbours in the Up-Lands, upon cheaper and easier Terms than we can supply them. -It is a just Complaint, That many of the Provinces have fet up feveral Species of Manufactures, which greatly interfere with the Trade and Prosperity of their Mother Country. Yet how shall we prevent them? -- There is but one Way to do it, that is either just or practicable: and that is, By an Exchange of Commodities to MUTUAL BENEFIT. - A mutual Benefit is a MUTUAL DEPENDENCE. And this Principle alone will contribute more to the preserving of the Dependency of our Colonies upon their Mother Country, than any other Refinement or Invention. For if we are afraid.

afraid, that one Day or other they will revolt, and set up for themselves, as some seem to apprehend; Let us not drive them to a Necessity to feel themselves independent of us;—As they will do, the Moment they perceive, that they can be supplied with all Things from within themselves, and do not need our Assistance. If we would keep them still dependent upon their Mother Country, and in some Respects subservient to her Views, and Welfare;—Let us make it their INTEREST always so to be.

For these Reasons therefore, it is humbly apprehended, That the Trade to our Colonies and Plantations, must appear to be of the utmost Consequence to the Power, Strength, and Prosperity of Great Britain. But to effectuate this good End, an important Question comes next to be decided; viz. "What Pro-" duce should our Colonies be most encou-" raged to raise and cultivate? - And what " Sort of Manufactures shall they be allowed " to barter in Return for ours?"—It is eafy to fee, That they cannot make large Payments in Gold and Silver; and it is also equally plain and certain, That we will not, cannot indeed, allow them to introduce fuch Things among us, as will prevent the Confumption of our own Commodities, to fuch a Degree, as to be upon the Whole, of National Disadvantage.

WHEREFORE, with great Submission, I will beg Leave to offer some few plain Observations, which perhaps might not be altogether unserviceable as to the Regulation of such a Trade.

FIRST then, It seems chiefly requisite, that due Encouragement should be given to our Colonies, to apply their Thoughts towards the raising of such Commodities, as do not interfere with those of the Mother Country.

SECONDLY, They should also not only be allowed, but be particularly incouraged to import all fuch RAW MATERIALS as are to be manufactured here in England; - even though we raise the same Sort ourselves: Because the more we have of these, the better; fince the cheaper they are purchased, the more of them can be worked up; and the more there are worked up, the greater Number of Hands are employed; and consequently, the more Money is either faved, or get to the Nation. Moreover, this Argument becomes so much the stronger, if the raw Materials we have of our own, are by no means fufficient for the Demand of the Manufacture, either as to Quantity, or Goodness; which is the Case with the Bar Iron here made in England: So that we are obliged to have recourse to foreign Countries for a Supply; - as in the Cafe

Case of Bar Iron we do to Sweden, to the Amount of near 200,000 l. Sterling a Year.

THIRDLY, We ought to permit our Colonies to supply us upon easy Terms with all fuch Articles of Luxury as we are wedded to, and will have either from them, or others. -Consequently, in Reason and good Policy, they ought to have the Preference, by being indulged to import these Articles under the Advantage of an easy and reasonable Duty; whilst the Commodities of foreign Nations are charged with higher Imposts and Customs. In such a Case, the mutual Exchange of Commodities between us and the Colonies, would become a mutual Advantage: But that is not all; For as the Duties would be moderate, the Temptations to Smuggling would be fmall; the Confumption of the Commodities of our own Colonies greater, and that of other Nations less: By which means, the Revenue itfelf would rife much higher than it doth, when there are large and heavy Duties: For these will ever be attended with one or other of the following Effects, either the preventing the Importation of the Commodity, or its Entrance at the Custom-house.

FOURTHLY, In the Regulation of a Trade with our Colonies, some Regard should be had to those distant Parts of the Country, which lie remotest from the Sea; that even the farthest

thele

evide

thest Inhabitants may likewise find Employment in the raising of such Commodities as are fittest for their Situation, and are light of Carriage. And if their Thoughts are properly taken up in the Cultivation of these Things, they will have neither Time nor Inclination to pursue other *Projects*, which might prove detrimental to the Mother Country.

FROM these Principles therefore it seems clearly to follow, That the Culture of Coffee, Cocoa Nut, Cochineal, Indico, and Pimento, ought especially to be encouraged in the mountainous, inland Part of Jamaica.— And that of Bar Iron, Hemp, Flax, Indico, and Raw Silk, in the Countries between, and beyond the Mountains, on the Back of Carolina, Virginia, Pensilvania, &c.

Some of these indeed are beavy Goods; and therefore seem not so proper to be raised in a Country so far distant from any Sea-Port: But on the other hand, when it is considered how particularly rich the Soil in those Parts is, and how well adapted the Country for the raising such Articles, and how conveniently the Inhabitants could load the Cattle they bring down every Market Day, with these Commodities; the Difficulty, I hope, in great Part vanishes, and the Propriety of assigning these Tracts of Land for the Culture of them, evidently appears.

ENOUGH therefore has been faid, to evince beyond all Contradiction, That it is the In-TEREST of the KINGDOM, that fuch a Trade as here described, should be carried on: But whether it is the Interest of the Merchant to EMBARK in it, is another Question: And vet, till he can find his own private Account in the Affair, it is too clear a Point, that whatever has been faid as to the Publick and National Advantage, will pass for nothing. -A Merchant will not engage in a losing Trade, and ruin himself to benefit his Country. Indeed it is unreasonable to expect he should. And the great Complaint against the Trade to some of our Northern Colonies long has been, That there is nothing to be got by it; that is, That the Merchant can get nothing, or next to nothing, if compared to his Gains to and from other Places. The Trade to Denmark, Sweden, or Russia, is more advantageous to him, though very detrimental to his Country; and therefore, if we would expect the Merchant to turn his Thoughts wholly to the Plantation-Trade, we must cause him to find his chief Interest in the Pursuit of it.

Now there are four Ways or Methods for turning a Trade into a new Channel, and flopping up the old one.

THE first is, By laying additional Duties upon the Commodities of one Country, but not

on those of another. By this means, if the Commodities are in any Degree equal to each other in Goodness and Value, the former will be prevented from being imported, on Account of their Dearness to the Consumer; and the latter will have the Preference, by reason of their Cheapness. But this Method, however expedient at particular Junctures, is to be used with great Wariness and Caution. For every fuch additional Duty put upon the Commodities of a foreign Country, will be looked upon by that Country, as an Act of Hostility committed upon its Trade and Commerce; which they will be fure to revenge upon the Commodities and Manufactures of the Country that was the Aggressor. Besides, high additional Duties are too violent and precipitate a Method of turning a Trade into a new Channel; - especially where the Manufacture is yet in its Infancy, and cannot answer the Demand for it. It is therefore much more fafe and prudent, to incline the Scale gently and gradually on the Side you would favour; that fo the Inhabitants of that Country may have time to raise the proper Quantity of the Commodities that are wanted, and may increase and perfect their Manufactures, by due Application and Experience. - And also, that we ourselves may not be distressed on Account of the Scarcenefs, or the Badness of the Commodity; or be forced to pay an exorbitant Price, by means of the Monopoly which the Inhabitants of . 10

#### 102 AN ESSAY CONTRADEA

of the favoured Country will have against us

WHEREFORE, fecondly, another more commodious, and less exceptionable Way, is, To grant certain Privileges and Exemptions; which shall continue till the Trade is sufficiently established, and needs no Support; that is, till the Merchant can find it worth his while to engage in it, without being paid at the publick Expence. Suppose therefore, that at the Beginning of such a Trade, certain Commodities were permitted to be imported upon eafy Terms; or rather DUTY FREE, which is better still: Then our Colonies would turn their Thoughts to the raifing them; and the Merchant would find his own private Account in importing them. But if any thing obstructed, fo that this did not prove sufficient to engage them in the Profecution of fuch Defigns; or that the Demand fill ran in favour of the Goods of another Nation; then,

Thirdly, THE Scale must be turned by the Addition of a Bounty upon Importation: And to quicken their Diligence, and excite a Spirit of Emulation, to these Encouragements may still be added,

Fourthly, A PERSONAL PREMIUM to fuch Merchants, as shall import the most of these Commodities, and the best in their Kind. Prizes of this Nature, are observed to do wonderful

derful Things in the raising and perfecting of a Manufacture. We have seen their good Effects in Ireland; and it were greatly to be wished we had the same laudable institution here in England. If certain Sums were vested in the Board of Trade for this Purpose, we might not despair of seeing the Mother Country in a few Years Supplied with Pot-Albes, Bar Iron, Flax, Hemp, Indico, Cochineal, Coffee, Cocoa Nut, Pitch and Tar, all Sorts of Naval Stores, and Raw Silk, chiefly from her own Colonies. The Fact is undeniable, That ALL these Things can be raised in our Plantations either on the Continent, or in the Islands. And though some Difficulties would attend the Enterprize at first setting out, yet Industry and Application, together with the Inducements of Bounties and personal Premiums, would furmount them all. If Prizes were fixed, viz. So much to the first, the second, and the third Importer of the most in Quantity, and best in Kind; and notice given thereof in the Gazette by Publick Authority; What an Emulation would it excite amongst all the Merchants of the Kingdom? How gladly would our Colonics embrace fuch Proposals, and quit the Purfuit of the Manufactures they are now engaged in? It is certain, these Manufactures, tho' highly detrimental to us, are not foradvantageous to them, as the Raising the above mentioned Commodities would be; because they could employ their Negroes in such Work; whereas

whereas the Negroes are found to be not so proper to engage in a Manufacture, which has a long Course and different Parts before it is compleated; and the Labour of the white People is dear and expensive.

As to the Article of Raw Silk, the Importance of it, I hope, will justify the recommending of the Culture of it in a very particular Manner. The excessive Price it now bears, and the great Difficulties to which the Manufacturers are driven, in order to get it at any Rate, require that fomething should be attempted without Delay. Every Nation now begins to perceive, That it is imprudent and impolitick to fuffer such precious Materials to be exported unmanufactured out of their Country. They have therefore prohibited the doing it under the severest Penalties: - And we cannot blame them. But for that very Reafon we ought to endeavour to raife the Commodity ourselves. And with humble Submission, no Time ever seemed so favourable for the doing it, as the present. For as the Price is high, this is not only an Inducement to fet about it; but also as we have now a different Sort of Inhabitants in our Colonies to engage in it, than we had before, we have therefore the greater Prospect of Success. The Complaint formerly was, That the Cultivation of it would not answer on Account of the Dearness of Labour. The Inhabitants towards the

the Sea-Coasts could employ their Time to greater Advantage in the Culture of Tobacco, Rice, &c. therefore the Scheme for Raw Silk must fail. But at present we have several thousands of Palatines and Meravians, settled in the Vallies between the Mountains in a Country much like Piemont, where the best Silk grows: Now as they cannot cultivate Rice or Tobacco for Exportation; and as they are far removed from the Center of Trade, and are also a parsimonious, abstemious People, they will certainly work much cheaper than the English heretofore towards the Sea-side, who were ever noted for the contrary Qualities. So that upon the Whole, the Time and the Occasion invite; the Necessities of the Manufacture, and the Interest of our Country, require that some Attempt should be speedily made for the raising of Raw Silk in our Colonies.

#### IX. PROPOSAL.

To purchase the Isle of Man of the present noble Proprietor; and annex it to the Crown of Great Britain.

THE late Purchase of the Hereditable Jurisdictions in Scotland hath set an excellent Example, which deserves Imitation. And indeed in the present Case the Reasons for annexing this Royalty to the Crown, hold stronger than in any of the others. For the Detriment, which

which the whole Kingdom fustains by the Alienation of it, is much greater than that which arose from all the Royalties and Jurisdictions of Scotland. The Isle of Man is the great Magazine for the French to deposite their Wines and Brandies, Teas, and other Commodities in, till Opportunity offers of Smug-gling them on the Coasts of England, Scotland, Ireland and Wales. The Loss hereby to this Nation, and the Gains to the French, are inexpressibly great. And as all the Sums drained from us, are employed by them in Time of War to hire Troops, and pay Armies to fight against Us, it will be no Exaggeration of the Truth to say, That since the Peace of Utrecht, they have drawn more Money from us by means of their Trade with this Island, than was sufficient to maintain 30,000 Men, with a Train of Artillery, during the late War in Flanders. - Is this now a Matter of no Consequence? Would the French have suffered a like Sovereignty and Jurisdiction to remain on their Coasts, so greatly to the Detriment of the Kingdom in general? No; the Case of the Sovereignty of Belle-Isle, formerly in Poffession of the Family of the famous Duke of that Name, plainly shews they would not.

Besides, the *Isle* of *Man* creates a prodigious Expence to the *British* Government, in maintaining so many Offices, Cruisers, &c. to guard against its illicit and pernicious Trade.

This

This Article alone cannot be less than 20,000/. a Year, including in the Estimation the Officers in Ireland, that are kept there on the same Account. I might also mention the notorious Frauds committed in the Customs, together with the Perjuries always attending them,—the Entry of certain Goods for Exportation,—receiving a Drawback or Debenture,—landing those Goods in the Isle of Man,—and then running them back again upon our own Coasts. But surely there is no need of labouring to convince any one in so clear a Case.

In short this Island may be looked upon as a Fortress in the Hands of our Enemies, from whence they are continually annoying Us in the most sensible Part, our Trade and Commerce. And the whole Question is, Whether we ought to disposses them or not? - A Question which admits of no Dispute, if the Publick Good, and Welfare of our Country are to determine it. Besides, the noble Proprietor himself need be no Loser, nay he may be a confiderable Gainer by fuch a Purchase. as the whole Revenue of the Island is said not to amount to more than between 3, or 4000/. a Year, it would be a cheap Exchange to the Publick, if he was paid 40, 50, or 60 Years purchase for his Property therein.

#### X. PROPOSAL.

To invite Foreigners of Distinction to travel among Us, that so we may have something in return for the vast Sums which we yearly fend abroad. To this End there is wanting a concise Treatise in French and English, setting forth the Advantages which Persons of different Tastes and Inclinations may enjoy by such a Tour: The Man of Pleasure and Diversion -The Virtuoso-The Scholar and Mancof Letters—The Lawyer—Physician—Divine— Merchant, &c. with Directions how to perform a regular Tour—a shorter or a longer what Things are most remarkable to be seen: - Churches - Seats - Gardens - Pictures -Manufactures - Ports, &c. - what Books or Treatifes are necessary to be consulted -how to learn the Language—with the proper Stages marked out - and a Calculation of the Expence in the moderate Way of Travelling."

IT has been observed before, under the XIIth Advantage of France, page 20. That Travelling into a Country is of greater Consequence to the Trade and Manufactures of that Country, than is usually apprehended. And as England is as deserving the Notice of carious and inquisitive Foreigners, as any Country on the Globe, it is a great Pity, that some ingenious Hand hath not yet lent them his friendly Assistance

Assistance, by an express Treatise on the Subject. It would be a great Pleasure to the Author to contribute what he can, only as an inserior Workman, in the accomplishing such a Design. And therefore if he could fungivice Cotis, as Horace expresses it, and be considered only as a Whet-stone to give an Edge to the Inclinations of others, who have Abilities to execute such a Scheme, he would gladly offer his Assistance.

WITH these Sentiments therefore he begs Leave to propose the following rough Sketch, only as general Hints to be improved upon, viz.

SUPPOSE a modest Treatise was wrote, without pussing, or too much extoling ourselves, or our Country, containing a Plan for a Foreigner to travel in England a Year, or longer, with Pleasure and Advantage:

CHAP. I. Setting forth the Situation of the Country, the Air and Climate, Nature of the Soil, and its general Productions.

CHAP. II. The present Inhabitants, Principles of their Government, their Virtues and Vices, Humours, Diversions, the Manner of conversing agreeably with them, and accommodating one's self to the general Taste and Genius of the Country, Method of learning the Language—and Pronunciation—Method and Expence

Expence of Travelling—manner of obtaining Recommendations from abroad to London, and from London to the other Parts of the Kingdom.

CHAP. III. Containing the Plan for a Foreigner to make the Tour of England in eight Stages, within the Compass of a Year, each Stage containing les Environs, or the District of ten Miles round the Place of Residence, in which District the principal Seats—Towns—Manufactures—Curiosities, &c. should be briefly described: viz. Supposing the Stranger landed the Beginning of April; then the Islander

Month of April. Stage, London and les Environs, in the

N. B. It might be improper, A Foreigner should stay longer in the Capital upon first coming over, than to settle his Correspondences, and get Recommendations to other Places; lest whilst he is a Stranger to the Language, he should associate too much with his own Countrymen, and be little benefited by his Travelling.

2d Stage, Cambridge and les Environs, in May. Here he should begin in earnest to learn the Language by the Help of some good Grammar, and to learn the Pronunciation by coming to Church with his French and English Common

Common Prayer, and listening to the Clergy-man's slow and deliberate Reading. If this Method was duly practiced, Foreigners would not find that Difficulty in learning the Pronunciation of our Language, as they are apt to imagine. And this is an Advantage of teaching it, in some Respect peculiar to Us.

3d Stage, Oxford and les Environs, in June. Note, In laying out the Route between Place and Place, it would be proper to contrive it so, as the Traveller might see as many Things worthy of Notice in his Passage, as he could.

4th Stage, Birmingham and les Environs, in July.

5th Stage, Bristol and les Environs, in August.

6th Stage, A Tour from Bristol to Portsmouth, through Wilton, Salisbury, &c. and then return to Bath in September.

7th Stage, Bath and les Environs, during October and November.

8th Stage, London, during the Months of December, January, February and March, which complete the Year.

Ir after this the Foreigner chooses to refide longer in *England*, and to see other Parts of the Kingdom, then he might take a Tour of Six Months in the following manner; viz.

1. York, and les Environs, in the Month of April.

· 2. Leeds and Manchester, in May.

3. Liverpoole and Chefter, in June. 4. Chatsworth and Derby, in July.

5. Nottingham and Northampton, in August.

6. From thence through London to the Place of Embarkation, in September; visiting the principal Seats, Towns, &c. of Kent or Essex, in the Way to Dover or Harwich.

CHAP. IV. Containing Observations on the Literature and Learning of the English; and the Advantages which Persons of different Tastes may reap, from being acquainted with them. — Concluding with a small Catalogue of the choicest Authors in polite Literature, and the several Sciences; —with a List of our best Plays, as to Morals, Language, and Design; that so a Foreigner may know, when it shall be worth his while to go to our Theatres.

#### XI. PROPOSAL.

To cut some Canals between our great Towns of Trade, for the Conveniency and Cheapness of Carriage.

Carriage. — Canals are much preferable to the making Rivers navigable, even where both might be done. For in the first Place, the Expence is not greater, except perhaps the Purchase of the Ground. In the next Place, they are kept and repaired at a much easier Rate. They are not subject to Inundations, or the Shifting of the Sand and Gravel, and are generally much shorter and streighter. — But what is above every other Consideration, A Boat laden with Merchandize in a Canal, may be drawn by a single Horse, on a sull Trot, as in Holland, up or down the Stream, whether there be a Flood, or not; and requires but two Men to guide it.

IF a Canal was dug between Reading and Bath, then there would be an easy and cheap Communication between the two principal Cities of the Kingdom, London and Bristol: Goods and Passengers might be carried at one: quarter of the present Expence: And surely: 75 l. per Cent. saved in Freight, deserves Consideration. The River Kennet, from Reading to Silbury-Hill, is a plain Illustration how practicable so far such a Scheme might be. And from thence to the Descent towards Caln, on the Bath Side, is the only Difficulty. But such who have seen the great Canal of Languedoc, are very well assured it might easily be performed, and at a fortieth Part of the Expence which the other was.

NAY,

NAY, a Gentleman of Credit and Reputation, lately informed me, That on the Side of the Devizes there is still a much more convenient Situation for the Purpose, where a few Spade-fulls of Earth could turn the Stream. either way. What a Pity is it, That fo many Advantages are neglected? If the like Situation had been in France, a Canal had been made long ago. — Indeed something might have been alledged in our Excuse, had we the same Difficulties to encounter with, which the French furmounted in making the Canal of Languedoc. But there are no Obstructions of Rivers and Rivulets in our Way; no need! of making Arches, and Troughs of Stone to carry the Canal over them; - no steep Hills to ascend, or Mountains to pierce through: And yet the Thing is not so much as attempted, though the common Interest, and the Situation of the Country, fo strongly invite us to perform it.

A CANAL also ought to be dug between Glascow and the Shoar opposite to Alloway; which would open a Communication between Glascow, and Leith, the Port of Edinburgh.—The Situation in these Parts is extremely inviting, even more so than the former; as the Passage is much shorter. And our Soldiers in Times of Peace might be employed in the publick Works, alternately with performing their

AN ESSAY ON TRADE. 115 their Exercise, receiving a suitable Addition to their Pay, when they are at work.

#### XII. PROPOSAL.

To raise a Fishery on the Northern Coast of Scotland, by giving a DOUBLE PREMIUM for some Years, till the Trade is sufficiently established, for all Herrings caught and cured by Persons residing within certain Districts, and exported to foreign Markets.

SEVERAL other Schemes have been lately offered to the Publick in relation to this Matter; and all of them, undoubtedly, good in fome Respects. Every thing of this Nature hath its respective Convenience and Inconvenience. And if the Scheme for carrying on the Fisheries by means of a Joint Stock, and a Company, impower'd to make By-Laws, and prescribe Rules and Regulations, can stand clear of the imminent Hazard of degenerating into a JOBB, through the corrupt Influence and finister Views of the Managers and Directors of fuch a Company; - I fay, If the Scheme is freed from all reasonable Suspicion of tending to fuch a Point, I should much rather prefer it to that which is here, with great Submission, offered in its stead. It is certain, that a Joint Stock is a quicker and more expeditious Way ; - but the Encouragement of a double Bounty appears to me more fure, and less

less liable to be corrupted. For in this latter Case, there are no Sums advanced till the Work is done, and the Herrings publickly examined, whether they are marketable or not: There is no fingering of the Money in the mean Time by Managers and Directors; nor can there be any Items of Expences and Difbursements, Fees and Salaries, brought to Account: Things which are the Bane of all publick Societies, and the great Cause of their Corruption, and degenerating from their original Institution.

Besides, if a double Bounty, or perhaps Five Shillings per Barrel; were given for all Herrings so cured and exported, it seems to me, That the Dutch themselves would be tempted by the Lucre of such a Bounty, to settle on the Northern Coasts of Scotland, and make one People with the Inhabitants of the Country; — which would be the greatest Advantage that Part of the Kingdom could possibly receive.

## XIII. PROPOSAL. not to

To establish Civil Governments at Gibraltar and Port-Mahone, and make them Free Ports.

— The Situation of Gibraltar is extremely commodious for vending several Sorts of Commodities in Spain and Barbary: And the Island of Minorca is not less happily situated for carrying

rying on an advantageous Commerce with some Parts of France and Italy, and, by means of the neighbouring Island of Majorca, with Spain also. Several Sorts of coarse Woollen Stuffs, and Manchester Goods, would be acceptable in Barbary, provided they could be had reasonably cheap: Which can never be, till there is a free Port. Several Sorts of the Manufactures of Manchester and Spittle-Fields, would be very agreeable to the Taste of the Spaniards, French, and Italians. But above all, our Birmingham Ware, our Cutlery, Razors and Scissars, Watches and Chains, Locks, Metal Buttons, Snuff Boxes, Toys, and all the Sorts of Bijoux d'Angleterre, as the French call them, which they are inexpressibly fond of, would find a prodigious Vent in all these Countries. The least Amount of the whole Trade, that might be carried on by means of these two Ports, were they made free, would be 100,000/. a Year. And furely fuch a Sum is worth the Getting; -especially by a Nation 80,000,000 l. in Debt.

If a Scheme of this kind was to take Place in the Island of Minorca, it would then also stand a fair Chance of being peopled by English Families, or by such as are well-affected to the English Government. Whereas at present there are scarce any, except the Garrison, but bigotted Spaniards, who at the first taking of the Place, would have been glad to have part-

ed with their Possessions for a Trisle, and to have retired into Spain. But now they are got immensely rich; their Lands are said to be more than five Times their former Value; and yet their Bigottry and Aversion continue as strong as ever.

#### XIV. PROPOSAL.

)

To have publick Inspectors into all our Manufactures; and to oblige all Exporters to deliver in Samples of the Commodities they intend to export, in order that they may be compared together, before the Goods are suffered to be put on Ship-board. This, if faithfully and honeftly executed, would always keep up the Credit of our Manufactures at home and abroad, on which the Spirit and Life of Trade principally depends. All possible means should be taken to prevent private Frauds in packing -Deficiencies in Weight and Measure-undue stretching of Cloths upon the Rack, which alone hath occasioned irreparable Loss to this Nation. The Fraudulent and Deceitful should be prevented, as much as it is possible, from getting Rich at the Expence of their honest Neighbours, and the Welfare of their Country, which is too often facrificed to their Knavery.

In short, In all Kinds of Manufactures, the worst Part of it should be put outermost for a Sample,

Sample, not the Best; that so the Buyer, in seeing the Mark and Seal of the Office, may conside in that, and be assured, that he is not deceived by what is out of Sight.

### XV. PROPOSAL.

To alter the Method of collecting our Duties upon particular Sorts of Goods imported, viz. By lodging them in Warehouses erected at the publick Expence, till the Importer fetches them away, according as he wants them, and pays the Duty, or causes it to be paid by the Person who purchases of him. This Scheme, I am sensible, would raise a great Clamour, if enforced by any compulsive Law; But if left to each Person's free Choice, there is the highest Probability, that it would univerfally obtain. Suppose therefore, That the Laws relating to the Customs in general should continue as they are; But that Permission should be granted to such Persons as are defirous of using it, to land their Goods in the publick Magazines, there to remain at the usual moderate Rent for Cellarage, till such Time as they find it their Interest to remove them. and then to pay the Duty. If such a Permission was granted to the Importers of Sugars, Rum, Wines, Brandies, Tobacco, Raifins, Prunes, and Currants, it is easy to foresee, That almost every one concerned, would embrace it. For, in the first Place, the Expence of Warehouse-

Warehouse-Room would be just the same; but the Difference between paying the Duty all at once upon Importation, and paying it by Degrees, would be very great, and much to the Advantage both of the Importer and the Publick. The Importer would be a Gainer, as he would not be streightned for Money to pay the Duties every time his Ship arrives; and might keep his Goods till he saw a promissing Market, or might export them to some Foreign Country, if they bore there a better Price. And this itself would be a great Advantage to the Publick, as it would render our Country a kind of common Magazine for: others, and as we should get by it all the Profits of Freight, Commission, &c. Moreover, the Publick would be more especially benefited, as the Trade would be increased, and the Goods afforded much the cheaper. When a Trade can be carried on with a fmall Stock, the more Persons are capable of embarking in it; And when the Duties are not paid all at once, but by Degrees, as the Goods can be fold, the Home-Consumer will buy for much the cheaper. For he will only pay the. King's simple Duty, - the Expences of the Adventure, - and the Merchant's fingle Gains. upon that Adventure: Whereas, according to the present Way of collecting the Revenue, every Consumer pays another considerable Article, viz. The Gains of the Merchant on the Sums advanced to pay the King's Duty. And

if the Goods have passed from the Merchant Importer to the last Retailer, through two or three Hands, before they come to the Confumer, then He pays two or three Advances the more. \* So that in fact, He not only pays the first Duty to the King, but perhaps twice as much again to others, by Means of these Advances upon Advances. The Consequence of all which is, That Trade becomes monopolized by a few Rich Persons, because there is a greater Stock required to carry it on; And Smugglers will be the more numerous, and the more audacious, because the Temptations to, and the Gains of Smuggling, become so much the greater. Whereas by the Method now proposed, both these Mischiess would be prevented to a great Degree. Deferve, The Proposal here made, compels no Persons to submit to these Regulations, but only permits them to make use of them, if they are disposed to do it. De Observe also, That this Scheme requires no new Officers, even at the Commencement of it: And when it has been thoroughly tried and known, it would certainly greatly lessen the Number of them. A Set of Publick Magazines (which, by the By, might be so contrived, as to be ornamental, as well as useful) built uniformly, and in a Quadrangular

<sup>\*</sup> See this Affair set in a true and strong Light in a Treatise entitled, An Essay on the Causes of the Decline of the Foreign Trade, London 1744. Printed for J. Brotherton. Pages 16, and 17.

drangular Figure, might easily be taken Care of and inspected by a very few Officers, who might well be spared from the Numbers now employed as Land-Waiters, Tide-Waiters, Searchers, Deputies, Extraordinary Men, &c. &c. - B Observe, 3dly, That with respect to any Embezzlement, which these Magazine-keepers might be suspected of, this might be prevented, as much as any thing of fuch a Nature can possibly be (not only by Weighing the Goods, Gauging them, and taking Samples before they are delivered into the Officers Care) but also by making it neceffary, That these Officers should be engaged with two fufficient Bondsmen in two Sorts of Securities, one to the King, to enforce their Fidelity to him, and another to the Mayor or chief Magistrate of the Town, and his Succesfors, where the Magazine is kept, in Trust for the Merchants, to ensure their Honesty to them: And that when any of these Officers are suspected of Embezzling the Merchants Property, the Party aggrieved may be at Liberty to bring an Action in the Name of the Mayor, or chief Magistrate for the Time being, and recover treble Damages, with Costs of Suit, on Proof of such Embezzlement. Now in all these Respects the present Proposal differs entirely from the late famous Excise Scheme; And every Objection made against that, is obviated bere.

As this last Proposal, and one or two more, would be attended with some Expense, were they carried into Execution; — And as the Nation, in its present Circumstances, might be supposed incapable of bearing a farther Load: I shall therefore endeavour to point out a Method how certain Taxes might be raised, without burdening any of the Necessaries of Life,—and yet sufficient to answer all these Expenses,—and be moreover highly conducive to the Reformation of the Morals of the People, and the general Welfare of the Kingdom. Viz.

### XVI. PROPOSAL.

To lay certain Taxes on the following Articles of Luxury, Vice, or Extravagance: which Taxes shall be applied to the general Improvement of Commerce; by maintaining Consuls, and erecting Forts, according to Proposal VI. Building of Magazines and Warehouses, as specified in Proposal XV. Giving Bounties and Personal Premiums to the greatest Exporters of our own Manusactures,—the like to the greatest Importers of Raw Materials from Foreign Countries,—especially from our own Plantations, according to Proposal VIII.—And in short, by pursuing all such Ways and Means, as serve to excite the Merchant and R 2 Manu-

Manufacturer to promote the Interest of their. Country, and their own together. Wherefore, the

1st Tax proposed is, That upon Batchelors and Widowers, of a certain Age, without Children.

THE manifold ill Consequences that flow from the modify Practice of Mens living Batchelors, are too glaring and evident. For we may venture to pronounce, without any Degree of Uncharitableness, That it is one great Cause of all the Lewdness and Debauchery of this Age. Some few indeed undoubtedly there are, who no ways contribute to these Immoralities by their fingle Life; But they are too inconfiderable in Number to deserve to have particular Exemptions, even were it possible to distinguish them from others, which it is not possible to do in a legal Way. In all Things calculated for the general Good, some Individuals must suffer; and it cannot be avoided. Now (to confider this Matter merely in a commercial Light) as there are at least Ninety-nine in an Hundred, who gratify their Defires, but so as to add no proper Increase to the publick Stock of Inhabitants, in which the Riches and Strength of a Nation do confist, one may easily judge of the Evil of such a Practice, by its bad Consequences. And in London particularly, where this Vice of living

living Batchelors mostly prevails, there it is observable, by the Bills of \* Mortality, that more

\* To this Paragraph it has been objected, that the yearly Bills of Mortality, which make the Burials more than the Births, are not to be relied upon, as to this Point; "Because there are no Births registred, but the Births of those who are baptized according to the Form of the established Church; whereas Diffenters of most Denominations are buried in the Church, and conse-

46 quently registred there."

Now as it is a very material Article to know, with fome Degree of Gertainty, Whether more Persons die in London, than are born;—and consequently, Whether the whole City would not be depopulated in a Century or two, if the Inhabitants followed the same Courses they now do, were it not for the INFLUX of Strangers, to supply these Deficiencies; I shall therefore beg Leave to offer the following Considerations, in Reply to the above Objection.

I. Some Children are begot in the Country, yet born in London; fuch, for Instance, whose Mothers come up to Town for the Convenience of skilful Attendance: And as this is the Case with many Families of Distinction, consequently, the Number of Births is so much

increased.

II. MANY Persons contract their Death-Sickness in London, yet are carried out of it for the Benefit of the Air, and die in the Country; there they are buried, and no Notice taken of them in the Registers within the Bills

of Mortality.

III. Just the same is the Case of those, who die in London, yet are carried to their Burial-Places in the Country: The Number of these is considerable in the Year; whereas there are sew Instances of Persons being carried out of the Country, to be interred in London.

IV. MANY Differences of different Denominations have Burial-Places of their own; and confequently, the

more Persons die than are born, every Year. So that were it not for the continual Supplies from the Country, where the Marriage State is not yet quite so unsassionable, that great Metropolis would be depopulated in a Course of Years. And yet there is no Place, in which there are so great Numbers of the Female Sex, in the Proportion, as in London. Can it be credited, though perhaps it is too true, That in this City alone there are upwards of Ten Thousand loose Women, from sixteen Years old to forty, who have not Fifty Children in a Year? And the sew they have, are born with all sorts of Disorders, and educated, if they chance to live, in all kinds of Vice and Wicked-

Numbers of their Dead do not fwell the Registers of the established Church fo much as might be imagined.

BUT allowing, That the Numbers of Diffenters buried in the established Church, may make some Difference in the Account, still this Difference cannot amount to any thing near the Sum which is found to be the Difference between Births and Burials in the Compass of a Year; viz. about Seven Thousand Souls. Numbers of Births, generally speaking, amount to 14. or 16000 in a Year; and the Burials from 21, to 24,000 in the fame Time: A Difference of three to two. How foon would this depopulate any Country, were it not for foreign Supplies? And how terrible do the Effects of Vice, Lewdness, and Debauchery appear to the general Interests of a Kingdom, when seen from this Point of View? What an Absurdity, therefore, was it in the Author of The Fable of the Bees, to fay, That Private Vices are Publick Benefits; if we take the Future, as well as the Present, into the Account! It is Virtue alone, which can make a Nation flourish.

Wickedness? In short, it has been often remarked, That the greatest Rakes, that all Europe can produce, when they arrive in England, and come to London, are quite stocked and scandalized at the unparalleled Lewdness and Debauchery reigning among Us, so far beyond any thing they could have imagined. Now if these 10,000 loose Women had not been debauched and corrupted, and were married to Persons of their own Rank and Condition, they might have had at least One Thoufand healthy Children every Year; and these in a fair Way to be bred to bonest Trades and Callings. Befides, upon the present Footing, the Injustice done to the married Tradesman, and Landed Gentleman, is most grievous and intolerable. \* For they pay the Excise, and feveral other Duties, in Proportion to the Confumption of their Families; but the Batchelor pays only for his fingle Self; i.e. Those who are most beneficial to the Publick, are doubly, trebly, or quadruply taxed, in Proportion as they are beneficial; and others, who are a Nusance to it, are therefore exempted. Is there any Justice or Equity in this? I add, Men may understand these Things as Patriots and Politicians, who would turn a deaf Ear to Lectures in Morality and Divinity. Nay more, Such Abounding of Lewdness, and Surfeiting of Proslitution, doth in Fact tend to increase the more unnatural Vices, instead of preventing them,

<sup>\*</sup> Causes of the Decline, &c. p. 8, 9,-snd 51.

them, as it is vulgarly, though erroneously, supposed. And the History of all Nations, from the former Times down to the present, confirms this Assertion. Antient Greece and Rome, and modern England, to mention no more, have surnished too many Examples in proof of this Point. And Reason itself should tell us, That it is with this, as with all other depraved Appetites, where Surfeiting and Satiety are Inducements to seek out less natural Ways of Gratification.

WHEREFORE the Proposal here is, That all Batchelors, after they have attained to the Age of Twenty five Years, shall pay TREBLE King's Tax,—Poor Tax,—Window Tax, and the Taxes upon Coaches, till they marry: And that all Widowers, between Thirty and Fifty, if they have no Children, shall pay Dou-BLE. Thus the greatest, i. e. the wealthiest Offenders, are properly multeed. For undoubtedly they have it in their Power to settle in the World, if they will. They are the People who set bad Examples; and by their Station, Riches, Intrigues, and Address, debauch those young Women at first, who afterwards become the common Prositutes of the Town. But as this only reaches the wealthich of them; and as there are valt Numbers of fingle Men, whom this Scheme would not affect, therefore there should be added to it a general Capitation Tax for all Batchelors,

of

of whatsoever Degree, above Twenty five Years of Age. And if this was fixed at Twenty Shillings a Head per Ann. for all above the Condition of Day-Labourers, and at Ten Shillings for them (with an Exemption only for common Soldiers and Sailors) it would be a very just and equitable Law, and would certainly be attended with many good Consequences, both as to the Morals and the Commerce of the Nation. The

2d Tax proposed, is, That upon menial Men-Servants, i.e. such who are not employed either for the Purposes of Husbandry or Commerce, but for State and Grandeur.

It was the great Principle, which run thro' the whole Plan of Sir M. D's Essay on the Causes of the Decline of Foreign Trade, before quoted, That each Person should tax himself according to the Figure and Station of Life he chose to appear in;—But that all the Necessaries of Life should be Duty free. Now in the Case before Us, Livery Servants, Footmen, Valets, Men Cooks, &c. &c. certainly cannot be ranked among the Necessaries of Life, and therefore are the proper Subjects for such a Tax. If any one chooses to have them, he himself chooses to appear in an elevated Condition, and therefore is the sittest to pay towards improving the Commerce, and extending the general Interest of the Kingdom.

Bur

But that is not all: For these Men-Servants, generally speaking, are by Nature fitter for other Employments, had they not taken up with this idle one: and might have been useful to their Country, by Sea or Land, either in the feveral Parts of Hulbandry, or in laborious Trades; whereas by their present way of Living they render themselves useles in all Respects; and not only so, but keep Thoufands of the other Sex out of an bonest Employment, which by Nature they are fittest for; and very often are tempted for the Want of it to take to vicious Courfes. I believe it will hardly be denied, but that Women Servants might perform all the Functions, which Men Servants do, in respect to waiting at Table, tending the Teakettle, &c. and equally as well. They might walk behind their Ladies, and carry their Books to Church, as well as any Footman, and why they are not permitted to do it, is Matter of some Astonishment to a thinking Mind. In short, the poorer and the middling Part of the Female Sex, are deprived of those Employments, which properly belong to them, very often to their own utter Ruin, and the Detriment of Society. If a young Woman has a genteelish Education, and a fmall Fortune, the stands upon the Brink of Destruction; and even if the is defirous. The scarcely knows, What Trade to put herfelf to, in order to be out-of the Way of Tempta-

Temptation. For, excepting two or three Trades, which Women still retain, all the Rest are engrossed by Men. We have Men-Mantua-makers, Men-Milliners, Men-Staymakers, Men-Shoemakers for Women's Shoes, Men-Hair-Cutters for Women's Hair, &c. and very likely in time we shall have Sempstresses, Laundresses, and Clear-Starchers, of the same Sex.

Such Perversions as these, of the Order of Society, are not of small ill Consequence, either to the Welfare of Individuals, or the Good of the State. And therefore to discourage such Practices as much as may be, in the Affair of Men-Servants, The Proposal is, That each of them shall be taxed Two Shillings and Six Pence in the Pound, according to their Wages, to be paid by their Masters and Mistreffes, and to be collected by the Officers of the Window Tax. If a Scheme of this Nature were effectually put in Practice, the Confequence would be, either, That Women-Servants would be employed, rather than Men, which would answer a good End in that Respect; or else, that these Men-Servants, tho' idle and useless in themselves, would contribute to the promoting of Commerce and extending our Trade, by means of the Tax they pay for this End; - though forely against their Will.

THE 3d Tax proposed, is, That upon Saddle-Horses.

2 THE

THE Tax upon Coaches, as far as it went, was an excellent and publick-spirited Act of the Legislature. It was laying the Burden, where it ought always to be laid, viz. upon the Luxuries, the Ornaments, and Refinements of Living. But undoubtedly it was defective as to its Extent: Many Gentlemen of Fortune, especially if they are single, do not choose to keep Coaches; and others may live in such Parts of the Country, where the Situation is not convenient for their so doing. Yet they all keep Saddle Horses in abundance, - Hunters, -and perhaps Racers, - without paying any Tax; though these Things are Articles of mere Luxury, Parade and Pleasure, as much as Coaches. Is there now any Equity or Justice in this? And are not such Persons the properest Subjects to pay towards the Support of our Manufactures, and extending our Commerce? Undoubtedly they are: And therefore the Proposal is this, That all Owners of Saddle Horses, young Horses under five Years old excepted, be taxed at the Rate of five Shillings per Horse every Year; - saving only one Horfe, which shall be admitted to be kept free of all Tax by each Owner, on the Supposition, That Riding may be necessary for his Health, or on the Account of Business. If greater Allowances than this were made, it would be opening a Door for Fraud and Collusion: And if less, it might bear hard upon

the real Wants and Necessities of many People. Perhaps even this Indulgence of one Horse, Tax-free, to each Proprietor, might seem too rigorous a Restraint; and might actually be so in certain Circumstances; but in all Cases of publick Concern, it is impossible to adjust Things in such a Manner, as that every Person can be pleased,—or even that the Interest of every Individual may be so particularly taken Care of, according to the Nature of his peculiar Circumstances, as that he can have no just Reason to complain. To proceed therefore, the

of every Sort and Kind, except Shepherds Dogs, and House Dogs. For every thing beyond this, is most undoubtedly an Article of Luxury, and Diversion; and as such, justly liable to be Taxed.

Owners of all Dogs shall pay One Shilling for each Dog every Year. And as there are such prodigious Numbers of Hounds, Greyhounds, Pointers, Setters, Spaniels, Beagles, Lap-Dogs, and Turnspits all over the Kingdom, this would bring in a very considerable Revenue, which might be employed to the greatest National Advantage, in supporting and extending our Trade and Commerce. — If this Tax should cause a Diminution of the Species, there would

be no Harm in that; nay, it would be attended with a great deal of Good, as for many other Reasons, so particularly for this, That the dreadful and shocking Calamities attending the Bite of Mad Dogs, would be less frequent than they now are. --- If any one should object, That Turn-spits ought to be considered as necessary Implements for dreffing of Victuals, and therefore ought to be excepted out of this Regulation: The Answer is obvious and easy; viz. That Jacks and Smoke-Jacks are preferable to Turn-spits in every Respect: ---They are cheaper, all Things confidered; and a Species of Manufacture, which ought to be encouraged But above all, there is no Danger from theny of those shocking Consequences aforementioned, which every Year have occasioned the Deaths of many People, in the most dreadful manner.

THE 5th Tax proposed, is a double Turnpike Tax on all Persons, who travel on Sundays. A modish and a reigning Vice this which ought to receive some Check and Discountenance from the Legislature. Not once in a thousand times can there be a just and reasonable Excuse for this Practice; and therefore it becomes a proper and sit Subject for a Tax, according to the Principles before laid down.

In short, We submit it with great Deserence to the Judgment of the intelligent Reader, Whether there is not ample Provision made in this Proposal, for all the Expences which might be incurred by the Execution of any of the Rest; — and that without burden-ing any one Article of the real Necessaries of Life. Were the Taxes to be laid, as here recommended, they would indeed very probably cause a considerable Diminution of the Articles which were to pay these Taxes: But even that Circumstance would prove, in many Respects, a very great National Advantage. And were the Monies raised by these Taxes, properly, judiciously, and faithfully applied to the good Uses and Purposes before mentioned, perhaps there would not be a Nation in the World, which could vie with us in Number of Inhabitants, Extent of Commerce, and the flourishing State of our Colonies and Factories in both the Indies.

# CONCLUSION.

A ND thus have I ventured to give my Sentiments, with that Freedom and Unreservedness, which is natural to Men who mean well, and whose fole Aim is the Good and Prosperity of their Country.—As I have no private Ends of my own to serve, either the one way or the other, I have had no Biass of Self-Interest upon my Mind.

It is true, I confess, that many of the Proposals here made, are Subjects very unpopular in the present Times: Neither would I willingly have advanced any thing harsh or disagreeable, even to prejudiced Minds, were it possible to have made Truth and Popularity, in this Case, consist together. But since that cannot be, what must be done? must we still go on, languishing in our Commerce, increasing in our Disorders, and beholding our Rivals taking their Advantage of these Missortunes, merely because some People do not choose to be told where the Core of the Evil lies, and

How it may be taken out? If the Alterations here proposed, are necessary or advantageous to the Publick, that alone should be sufficient to recommend them to the Esteem of all Persons of Worth and Character; But if they are not, I put in no Plea or Apology for them:—Only I will add, on behalf of the Author, that his Intentions were good, though He was mistaken.

TAM also well aware, That there is a customary Prepossession entertained against Projects of all Kinds; And that Projectors are looked upon as a Race of Beings who have something very singular and whimsical in their Composition. And yet I think it must be allowed, That, notwithstanding all the Prejudice which some chimerical Gentlemen of this Stamp have drawn upon themselves, there must be both *Projects* and *Projectors*, when Things are bad, and want mending; otherwise they never could be better, nor the Faults corrected.

WITH Respect to the Case before us, there are two general Objections, as far as I am able to perceive, which may be made against what has been advanced.

THE first is, That many of the Proposals, though they may be right in Theory, are impracticable in Fact.

THE

THE fecond is, That the Schemes here laid down, are attended with their Inconveniencies as well as others.

To the FIRST of these I reply; That no one can be certain of this, till an Attempt has been made to put them in Practice: And we may be very sure, Every one of them might be easily put in Execution, were Persons as really animated with the Love of their Country, and as truly concerned for its Welfare and Prosperity, as they pretend to be; And had some among us, in their Opposition to every Measure of the Government, no dark, latent Scheme at Heart, which they cover over with specious Names.

BESIDES, None of these Schemes, no, not all of them together, are so difficult in themselves to be carried into Execution, as that fingle one which has been so happily perfected in our own Days, the Union with Scotland.—In that Case, inveterate National Prejudices,—National Pride,—Family-Interest,—Self-Interest,—facobitical Interest,—Pretences of Conscience,—Fears of Religion, and the respective Churches of both Kingdoms:—All these conspired to heap up Difficulties in the Way. And yet all were surmounted by the Firmness and Address of those true Patriots of both Kingdoms, to their immortal Honour,

Honour, who had the Management of that Affair. Whereas in the present Case, there can be no Pretences of Conscience, no Fears of the Church's being in Danger, to encounter with: There are no National Animosities, or National Pride, or the Interest of great Families, to obstruct us; And very little of Party Spirit can mingle in any of these Affairs: Self-Interest is the chief Obstacle to be surmounted. This is indeed a great one, which will draw every thing that it can to its Assistance. But it is not insuperable, if withstood by Men who have a true Love for their Country, and Prudence and Discretion to time their Endeavours, and guide them aright.

MOREOVER: Supposing none of these Proposals are such as will go down at present, while Men are full of their Prejudices, and fond of their own Opinions: Yet, even in that Case, it may not be amiss to lay before them the Things that are right; which they may confider of at their Leisure. When Men come to reason and restect, their Prejudices will begin to foften; and Time will reconcile them to those Expedients, which they had inveighed bitterly against before; perhaps for want of understanding and knowing them better. ---Thus it often happens, That Proposals deemed impracticable at one Season, on account of the popular Outery against them, may be called for at another, with equal Vehemence and Impa-

Impatience. And therefore, with humble Submission, It may not be amiss to leave these Proposals upon Record for future Examination, though none of them should be judged feasible at the present.

But besides the former Objection, a SECOND is, That this Scheme itself is attended with Inconveniencies, as well as others.

I GRANT it is: And furely no Man in his Senses could ever suppose, That there could be any Scheme calculated for the general Good, which would not bear hard upon the Interests of some particular People. --- The true way of estimating any Proposal is, to consider, Whether it doth remedy more old Inconveniencies than it introduces new ones; --- And whether, upon the whole, it is beneficial or not, -and its Benefits of such Importance as deserve to be regarded :--- Laftly, Whether likewise some of these very Inconveniencies which are supposed to attend it, may not be prevented or amended by further Experience and Observation. This is the true way for estimating any Proposal: And by this Rule I would choose, that my own should be tried; and then let them stand or fall.

WE are always complaining of the bad Morals of our People; of a general Corruption; and the Decay of Trade. Nevertheless, it is

very certain, that the present System of Things greatly contributes to the Increase of each of these Evils. My Meaning is, that it lays powerful Temptations in Peoples way. \_\_\_ And then, what can be expected? Some few perhaps will prove their Virtue to be superior: but the great Majority will certainly be corrupted. For evident it is, that the Innocence of the Bulk of Mankind, is best preserved by their being kept ignorant of the Temptation. or at a great Distance from it. Now what is the natural Tendency of Custombouse Oaths. Election Oaths, Freedom Oaths, &c. &c. but to entice and encourage Mankind to be guilty of the foul Sin of wilful and deliberate Perjury? What are the beavy Taxes upon the married State, and Exemptions for Batchelors, but the like Inducements to Men to remain fingle, and to gratify their Defires in an unlawful Way? What are all the exclusive Companies, all the heavy Duties upon Importation, and the many Statutes for cramping the Trade of Ireland, but so many continued Attempts to drive away the Trade from Our-felves to the French, who are not only our Rivals, but the most dangerous ones we can have? And truly we have greatly succeeded in all these: Yet who can we blame but ourfelves? It may be pleaded indeed in Excuse for these Laws and Establishments, That they were not originally intended to produce those bad Effects. I allow they were not; nor are they

13115

they charged with any such Design. But the Question here is, Not what was the View of Makers of these Laws, or what was the End proposed by such Establishments, but what is the Tendency of them, as verified by Experience, and how they do operate in Fact? And if it is made to appear, That they are so destructive in their Consequences, and subversive of our Morals, Liberties, and Commerce, it is but of little Consolation to know, That they were established with a better View, as we are now considering the Things themselves, with their natural Consequences, not the Characters or Design of their Authors and Projectors.

I WILL only add one Reflection more to what has been faid; viz. That if we would still keep on our Trade at a Foreign Market, we must, at least, be upon an equal Footing with other Nations; as to the Goodness and Cheapness of what we have to sell; otherwise we cannot expect, That Foreigners would give Us the Preference to their own Loss. then being the State of the Cafe, it necessarily follows, That we must always have an Eye upon the Practice and Proceedings of our Rivals, and take our Measures accordingly, as far as regards this mutual Emulation. they contrive Ways and Means to render their Manufactures cheaper or better than they did before, so as to outvie Us; we must strive to outvie

outvie them in Cheapness and Goodness, or be deprived of that part of Commerce by them: If they invite Foreigners to fettle among them, in order to have the more Hands, and to keep down the Price of Labour; we must do the same, or take the Consequence to ourfelves: If they allow of no exclusive Companies in a Branch of Trade, which interferes with our Trade; we must put down our Cornpanies, or lose that Tmde: If their Manufacturers are fober and industrious, and work for low Wages, and feldom become a Burden upon their Parishes; we must endeavour to put ours upon the same Footing, or be content with the Poverty, which will be brought upon Us: If their Government requires little or no Duties upon Importation, in order to encourage the greater Numbers to engage in Trade, and that all Merchandize may come the cheaper to the Confumer; we must imitate them in that respect, and change our Customs into In-land Duties, or administer continual Temptation to the Needy and Fraudulent to turn Smugglers, and fuffer ourselves to fink under these Evils, together with the Burden and Weight of our Customs. These are the Alternatives which are fet before Us; and one would think, That if Mankind were not greatly blinded with their Prejudices, and biaffed by private Interests and finister Views, they need not be long in deliberating which to choose. -Not to mention, That as every Country in Europe

Europe now begins to understand the Maxims of Trade, and apply themselves to Commerce, and are actually raising all Sorts of Manufactures of their own, and have laid new Duties upon ours; for these Reasons, We ought to be more intent than ever to contrive all Ways and Means possible to lower the Price of every thing we export, in order to overbalance these additional Duties by Dint of Cheapness of Labour, and to outvie these new Rivals by the Goodness of our Manufactures del ere crefus.

AN

# APPENDIX,

Containing a PLAN for raising ONE only TAX on the Consumers of Luxuries.

HE foregoing Proposals were endeavoured to be drawn up in such a Manner as pointed out, how the defired Alterations in our Systems of Commerce, and of col-

lecting the Publick Revenue, might be brought about as gradually as possible. And no greater-Deviations were attempted to be made from the present State of these Assairs, than seemed absolutely necessary; lest too precipitate a Shock might prejudice Mankind against Conviction. I did not therefore propose

pose some of the above-mentioned Alterations, as what appeared to me the very best, which could be devised; but the best in our present Circumstances, and the likeliest to succeed. For I am convinced, That what I am now going to offer, is in itself a much more effectual Remedy, if our Constitution is strong enough to admit the Application of it.

THE Scheme is generally ascribed to the late Sir M. D. as the Author of it; and is taken out of a Quarto Pamphlet, which would do Honour to any Man, several times already quoted; viz. An Essay on the Causes and Decline of the Foreign-Trade.

But as I shall take the Liberty to make fome few Alterations from, and Additions to, what this most ingenious Author hath advanced, I shall put those Articles in a different Character, that they may be distinguished from his; And that his Original Plan may not be involved in any Censure, which perhaps is only due to my Additions and Alterations.—The Reasons which induced me to believe that some few things might be altered, or added for the better, shall be laid before the Reader in the Sequel.

#### \*\*\*\*\*\*\*\*\*\*

An Extract from Page 44, &c. of the Essay on the Causes and Decline of the Foreign Trade.

#### First and Second Proposals

O lay one Tax on the Consumers of Luxuries, and take off all our other Taxes, Excises, and Customs:—And when that is done, to make all our Ports free.

As the Money-Affair is always the grand Object, formething, by Way of Equivalent, must be given for the Taxes taken off: As such the following Scheme is offered.

A Proposal for raising one only Tax on the Consumers of Luxuries. It is hereby proposed, That all Persons using, wearing, or drinking the following Articles of Luxury, as particularly specified, be obliged to take out a Licence Yearly, paying each one Subsidy for each Article of three Half-pence in the Pound only, on the computed Income they should have to support the Station of Life they voluntarily place themselves in, by the Article of Luxury they use, wear, or drink, as by the Example following.

THIS is the general Scheme of the Author: And I have ventured to make such Additions to it, as, I hope, are confistent with his good Design. I shall therefore make no Apology for each particular Alteration; And only observe with respect to the 5th and the 17th Articles, i. e. The Distinction between drinking French Wines, and other Wines (which are the principal Alterations) that they both feem to me to be highly necessary. The Author indeed makes no Difference throughout the Treatise between promoting the Confumption of French Wine or Port Wine, as if it was the same to the Commerce of this Kingdom: But, though I acknowledge with Pleasure the Instruction I have received in other Parts of the Science of Commerce, I cannot follow him in this; and must still stick to the Maxims of all the former Writers on Trade, till I can see more Reason to alter my Opinion. If French Clarets, Burgundy, and Champagne, were as cheap as Port, few Men would hesitate long which to choose. The British Merchant, I think, has satisfactorily proved, That were we to abolish all Duties on French Goods, and they to do the same on English (as was partly the Scheme of the Ministry during the four last Years of Queen Ann) the Consequence would be, at least, for a great many Years, That England would be, over-run with French Silks, Laces, Wines, Brandies.

Brandies, Cloths, Suffs, Ribbands, Fans, Toys, &c. And the French would take very little or nothing in Return, more than at present. The Experiment therefore which he proposes, seems to me too hazardous; the bad Effects of it would be violent and instantaneous, and the good ones very slow and gradual; so that the Patient would be in Danger of expiring, as is often the Case, before the Medicine can operate.

Besides, Were we to give such Encouragement to the French Wines, as is here supposed, what would become of our Portugal Trade? which, as to the Balance of it, is worth two Thirds of all the rest. The Court of Portugal would lay an high Duty, and perhaps a Prohibition, upon all British Commodities, the Moment they found we did not give due Encouragement to theirs: Which indeed by Publick Treaty we are bound to do. And the French have always viewed this gainful Trade with a longing Eye; and would be glad to put in for it, if they found any Opening.

But to return; As to the Scheme in general, it is certainly very good. Perhaps the Valuation of the Income supposed necessary for some sew of the principal Articles is set too high; being, I presume, calculated for the Meridian of London, and the adjacent Coun-

Counties: Whereas the Calculation should have been made more upon a Medium with the more distant Parts of the Kingdom, where things are much cheaper. But this is a Trisle; and might easily be rectified. It is sufficient, that the Scheme is good in itself, and is still capable of great Improvements:

THE Author in the next Place gives a general Rule, "That all Articles of the fame "Degree, or under the Article paid for, are "included in it." i. e. If I understand him rightly, The greater includes the less. For Instance, If a Person pays for a Coach and Six, he is thereby entitled to use a Coach and Four, a Chariot, a one Horse-Chaise, or any other Vehicle he pleases. If he enters a whole Service of Plate, he may use Side-Boards, and all other Plate besides. If he takes out a Licence for drinking French Wines, the same will serve for Port, Spanish, or any other, for Rum and Brandy; and so on.

INDEED as to playing at Cards, &c. I cannot allow this to be comprehended under the Article of going to see Publick Diversions, not because in the one Case, Persons are rather Spectators than Actors, but also because Gaming of every kind ought to be discountenanced as much as possible.

I ADD also, what I conceive the Author has omitted, That the bigbest Article which any Man enters, gives the Lead to all the rest; fo that he is to pay for each of the succeeding the same which he pays for the first. If a Person enters a Coach and Six, and pays Twelve Pounds Ten Shillings, according to the Rates in the Table, he is to pay the same Sum for every other Article he enters. And there are the following weighty Reasons for it: First, That by fo doing, this Scheme becomes the most excellent sumptuary Law, that ever was devised: And secondly, That it is just and reasonable each Person should pay in Proportion to what he Uses of any Commodity: Now the most probable Grounds we can go upon (for the Affair will not admit of Certainty and Demonstration) is, That Persons in general live in Proportion to the Figure they make. A Person, who keeps a Coach and Six, is supposed to have more Wine drank in his Family than one who keeps only a fingle Chariot, and to use a greater Quantity in Proportion of every other Article, which he enters; and therefore in all Reason and Justice, the should pay the more.

THE next Article that he proposes is, "That Husbands should pay for their Wives "the one Fourth of the Article they pay for themselves, to entitle them to Use the

" fame; and that the Parents should pay for " each Child under Age the one Eighth of the "Article they pay for themselves, to entitle them to use the same." Here again I am forry I find myself obliged to differ from the worthy Author. If the Husband is taxed for his Wife, and Parents for their Children in Proportion to their Numbers; this would be making too near Approaches to the Fault the Author had himself so justly condemned in our preient System. Besides, when a Man has a Family, he is necessarily obliged to enter more Articles than he would do, were he fingle. And it would be a great and discouraging Hardship for the Heads of Families to pay these Articles, or any Part of them, over again, on the Account of their Wives and Children. Moreover, I do not see how we could rightly distinguish which Articles belonged to the Husband, which to the Wife, and which to the It therefore feems to me a more Children. equitable way, That the Husband or Parent be responsible for the whole Family, and be considered, as if he entered all the Articles of his fingle Self. If the Family are extravagant, and will use more Articles of Luxury than his Circumstances will afford, it is his Business to restrain them: And the present Plan makes it his immediate Intérest, as well as Duty so to do.

THE Author then proposes, "That Batche" lors should be doubly taxed, if of Twenty "One Years of Age."—This, with Submission, is too soon. Suppose rather, That they paid a fingle Tax for each Article, till they arrived at Twenty Five Years; and then were trebly taxed, till they married; and that Widowers likewise without Children, if upwards of Thirty, and under Forty Five, were doubly taxed.

THE Author then recommends, That all Persons, such as he there reckons up, who get their Living by the Luxuries and Extravagance of others, should be obliged to pay for every Article they enter, as if they had an Income of Five Hundred Pounds a Year. But here I think there is not a sufficient Distinction made between the different Classes of these People; seeing that, according to him, all must pay alike, from the meanest Ale-house to the greatest Tavern; which surely is a very unequal way of Taxing, and not at all agreeable to his own just Maxims. Suppose there-fore, instead of fixing upon any particular Sum, That each of these Persons should tax himself, by his Way of Living, according as others do, but only much higher, viz. That all keepers of Taverns, Coffee-houses, Long-Rooms, Publick Gardens, Ale-houses, &c. And that all Players, Shew-men, &c. should

be trebly taxed, as long as they continue in such Professions;—and that even this should be doubled on all those, who retail French Wines or Brandies.

But undoubtedly the Way and Manner of levying fuch a Tax, is the Point which merits most the Attention of the Publick. on this Head, the worthy Author has given great Specimens of an uncommon Sagacity and Penetration. I shall not stay to repeat all his Rules and Directions, but refer those who are disposed, to the Treatise itself. But there is one Point, which particularly deserves to be mentioned for its Singularity and Contrivance, and as it is the Master Key to all the rest: And that is, the Method which he has taken to make each Person immediately interested in detecting the Frauds and Impositions of his He observes in the first Place, Neighbours. That as the whole Scheme is a Tax upon Vanity, the very Nature of this Passion betrays itself, and will not be concealed: Consequently, there can be little Room for defrauding the Revenue in such a Case. — But suppose a few Frauds should be attempted in some particular Circumstances; then the following Method, which he proposes, is the most effectual Way of detecting them, viz. Let each Person for the first Year voluntarily tax himself according to the Station of Life he chooses to appear in; and let him take out a Licence of the proper Officer

Officer in each District, specifying the several Articles he enters: Let a Parish Register be kept of all the Money so raised in the Year within that Parish; and let the Tax so collected, be a Standard for laying on the Parish Rates of Church, Poor, Lamps, Scavengers, and all other Parochial or County Payments for the ensuing Year. The Consequence will be, That those who pay most, will naturally detect such of their Neighbours as use any of the Articles above-mentioned without entering them; because in so doing, they cause this latter Burden of Taxes to light the easier upon themselves, and oblige their Neighbours to contribute their Quota with them. And as the Author proposes, That the suspected Perfon should be chaged with the Onus Probandi, or Justification of himself, this would still facilitate the Scheme. And the Idea of an Informer would be very far from being confidered in that contemptible and detestable Light it is at present, when the best, the greatest, and those who make the most splendid Figure in each Parish, would be of the Number.

This Tax is proposed by the Author to be laid on the first Year without taking off any other, in order to have a Fund aforehand, and to pay our National Debt the faster, and also to see what it would amount to. Then he proposes, That all other Taxes should be abolished

abolished Year by Year, as this increases, and is found adequate to supply their Places.

I WILL therefore fingle out a Gentleman of Two Hundred and Fifty Pounds Income by the Year, with a Wife and four Children: And I will suppose that he enters every Article he well can; and compare that Tax with the present, in order to see what Advantages may be reaped by it.

A Gentleman of 250 l. per Annum, living fomething profusely, enters, I. 1. A Service of China, which inall other Articles of cludes III China 2. A Side-Board of Plate; all other Plate (except Services) included 3. Jewels, viz. Necklaces and Solitaires; Rings and Ear-Rings 3 included 4. A two wheeled Chaise 3 5. A Pack of Hounds; Grey-7 hounds, Guns, Nets, &c. in-3 cluded 6. Men-Servants in Livery, or to 3 wait at Table 7. Saddle Horses 1 II 3 8. Port, and all Wines (except) French) Rum, Brandy, and 3 Spirits included Carried over —

3. \* He is charged with all fecondary kind of Advances, i. e. The reciprocal Advances of the Price of Labour, Provifions, and all Commodities, which Tradesmen, Landlords, and all People concerned, make upon one another.—This must at least amount to as much more

Total paid at present, even with 340 0 0
But

\* THE Nature of primary and fecondary Advances may be best explained by an Illustration of both in the same Trade. Suppose A by Trade a Shoemaker: He buys his Leather of the Tanner and Currier, and pays to them the King's Duty, with their Advances upon it: He charges this Duty, with the Addition of their Advances, and a new one of his own, upon the Shoes he sells. This is the Nature of all primary Advances, be they multiplied ever so often. The Interest of the Money, so paid and used in Trade, as Matters now stand, make it necessary, that they should be.

But this is not all: for A. finds that B. C. D. E F. G. &c. That is, The Butchers, Brewers, Bakers, Farmers, Cheefemongers, Chandlers, Grocers, Clothiers, Taylors, and in short, all the Tradesmen whom he deals with, do likewise charge him with their respective Advances. Therefore, as he has no Resource but what his Occupation brings in, he charges his Shoes, as it were again, with a secondary Advance, in order to answer their Demands. Thus the Affair goes round, they charging him, and he them; till the Original Price of each one's

But the Gentleman concerned pays 40 l. per Annum for the Duties and their Confequences, yet the Original Duty to the King was no more than

Deduct therefore one third at least for collecting

Remains clear to the Government 13 6 8

I HAVE here allowed one third for collecting: and whoever confiders the vast Expence which the Government is at, especially in the Salt and Customs, will be apt to conclude, that I have not allowed enough. As there is a Draw-back upon all Salt exported, and Salt for the Use of the Fisheries; therefore it is necessary to have Salt Officers in all the Ports and Creeks of the Kingdom, to prevent Frauds and Impositions upon this Account. An amazing Expence, which this amounts to. And as to the Customs; there is not one Port in ten (except

Commodities is increased to a prodigious imaginary Value. It is therefore no longer to be wondered at, That a Pair of Shoes, which doth not pay four Pence Duty to the King, is yet enhanced a Shilling, or more in the Price, fince the Duty laid upon Leather, and other the like Necessaries of Life.—Whereas no fuch thing can happen according to the Nature of the Scheme here recommended: All Necessaries of Life, being Duty-free, and without Advances of any kind.

(except the Ports of London, Brijiel, Liverpool, Southampton, Hull, Newcastle, Lynn, Leith, and Glascow) which enter Merchandize enough to defray the Expences of their own Officers. -What a Difference is this, in comparison to the Scheme proposed! In that, as it is proposed, that each Person shall be obliged to come. and enter, and pay the Money without any farther Expence, three Pence in the Pound would be full sufficient for the Salary of the Receiver and his Clerk: In this, Six Shillings, and Eight Pence will scarcely satisfy for the collecting of Twenty Shillings, even by computing all upon an Average. So that though the Subject, with all his Oeconomy, pays, annually Forty Pounds, the King receives but one third of it, viz. Thirteen Pounds Six Shillings and Eight Pence: Whereas in the other Case, the Subject would pay but Twenty One Pound Seventeen Shillings and Six Pence, tho, he appeared in a much gayer Scene of Life. And yet the Government would receive, clear of all Charges, Twenty One Pound Truelve, Shillings, which is upwards of one third more. What then would it have been, had they hoth lived in the same Degree of Gaiety and Profuseness.

Such a Scheme therefore as here proposed, one would think, should recommend itself, For all Persons in the Nation would find their Account in it in the long run, if they year

could have the Patience to look forward, and were not so contracted in their Views, as to be chained down to the present Advantage of private Interest. — But what has been already mentioned, is only one Good Consequence, out of a multitude of others which would attend it. For as it would render all things cheaper, it would necessarily increase our Foreign Trade, enrich our Country, employ our Poor, increase the Stock of Inhabitants, raise the real Value of all our Lands and Commodities, and depress the present imaginary and factitious one: As there would be no Duty upon Importation, it would invite more Persons to engage in Trade; and prevent the very Possibility of Smuggling: As all Ports would be open, every Part of the Kingdom would have a fair and equal Chance; and the Sun-shine of Commerce and Plenty would be diffused equally throughout: Above all, It would be attended with two excellent Consequences, which deferve to be more particularly noted, as we have little of the Kind now existing. For first, It would be a most excellent fumptuary Law, to give a Check to the Luxury and Extravagance of the Age. The bigbest Article which a Man enters giving the Lead to all the rest, would make it his immediate Interest, to go as Lowas possible: So that he would find himself under a continual Monitor to forego his Pleafures, till he could better afford to pay for them. His afpiring Vanity would be checked by the Considera-

Confideration, That he is to pay the more for every other succeeding Article in Consequence of the first. Secondly, It would be a Tax, which no Man could complain of, as it would be his own voluntary Act and Deed, to rate himself in this or that Class, and to appear either in an higher or a lower Station of Life.

But alas! after all, what can we expect from such a World as this?—The Scheme before. Us is of too enlarged and noble a Nature, to be rightly comprehended and truly relished by narrow and contracted Minds. It clashes with the present Interest of too many Persons, to be likely to succeed. And I am asraid, I may apply to this Author, the Words I heard in a Case not very different from it: Sir, This is all right; But it will never do:—It is TOO HONEST.

However, there is a Satisfaction in offering things right and bonest to Publick Consideration, whether they are accepted, or not. It is a laudable Passion to be willing to do the most extensive Good. And there are not many Men, though many may be honest and upright in their private Capacity, who think themselves concerned to be active and indefatigable in promoting the Welfare of the Community. The Case with the Selsish and Designing is quite the reverse: They are every vigilant and industrious in deseating every Measure,

Measure, which is not calculated for their own private Advantage, to the Detriment of others. Their Craft is endangered by such a System: And therefore they always cry it down, and are zealous in opposing it.

Thus it is, That in most Contests, where the Publick Good is concerned, a few knavish and dishonest Persons are an Over-match by their Zeal and Activity for greater Numbers, who are more negligent and indifferent. Every generous and disinterested Proposal naturally alarms all those, who prey upon the Publick. — But let the Event be what it will, an honest Man, who doth his Duty, enjoys that Satisfaction which they are Strangers to.
